REPORT

TO

HIS EXCELLENCY WILLIAM HUMBLE, EARL OF DUDLEY,

Esq., Esq., Esq.,

LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

MAY IT PLEASE YOUR EXCELLENCY,—

I have the honour to submit the Forty-first Annual Report on Marriages, Births, and Deaths in Ireland, for your Excellency's consideration.

GENERAL SUMMARY.

During the year 1904 the Marriages registered in Ireland numbered 22,961; the Births, 103,811; and the Deaths, 79,513. The marriage-rate which is 5·22 per 1,000 of the estimated population shows an increase of 0·01 as compared with that for the year 1903, and is 0·21 above the average rate for the ten years 1894-1903, and the highest rate for any of these years; the birth-rate (23·6 per 1,000) shows an increase of 0·5 as compared with that for the preceding year, and is also 0·5 above the average rate for the ten years 1894-1903; and the death rate (18·1 per 1,000) is 0·6 above the rate for the preceding year, and 0·1 above the average rate for the ten years 1894-1903.

The natural increase of population recorded, or excess of births over deaths, was 24,298; the loss by emigration amounted to 36,902; a decrease of 12,604 in the population would thus appear to have taken place during the year, but against this decrease there is a set-off in immigration, of which no official record has been obtained. The estimated population in the middle of the year was 4,402,182.

TABLE I.—Showing for each of the years 1894-1904 the estimated **Population**; the number of **Marriages**, **Births**, and **Deaths** registered, and the number of **Emigrants** enumerated, with the rates per 1,000 of the estimated **Population** represented thereby; and the averages for the ten years 1894-1903.

Years	* Estimated Population in the middle of each year	Numbers Registered			Number of Emigrants as returned by the Registrars	Rate per 1,000 of Estimated Population			
		Marriages	Births	Deaths		Marriages	Births	Deaths	Emigrants

The Diagram opposite (No. 1), which I have constructed shows the respective rates per 1,000 of the population represented by the Marriages, Births, and Deaths registered in Ireland in each of the twenty years 1885-1904, and by the number of Emigrants enumerated in the same years.

* See page 172.

The Local Registration Officers holding office directly under the Department, or who have entered into bonds with the Registrar-General for the due discharge of their duties number 2,693. During the year 1904, 621 cases of vacancies or appointments were dealt with.

I submit a table showing the number of Searches made and Certificates issued at the General Register Office (exclusive of Searches made and Certificates issued for official purposes, which, in 1904, numbered 382 of the former and 296 of the latter); also the amount received as fees for same, in each year, since the commencement of the Acts for the Registration of Births and Deaths and of Roman Catholic Marriages in 1864.

TABLE II.—NUMBER OF SEARCHES MADE; NUMBER OF CERTIFICATES ISSUED, AND AMOUNT RECEIVED AS FEES FOR SEARCHES, &c., AT THE GENERAL REGISTER OFFICE, DUBLIN, DURING THE 41 YEARS 1864-1904.

Year	Annual Number of Searches at the Register	Annual Number of Certificates	Amount received as Fees for Searches, &c., and paid into His Majesty's Exchequer	Year	Annual Number of Searches at the Register	Annual Number of Certificates	Amount received as Fees for Searches, &c., and paid into His Majesty's Exchequer

1884.	1,254	600	45 0 0				

The number of cases of offences against the Acts administered by this Department reported during the financial year ended 31st March last, was 417. On careful inquiry into the circumstances, prosecutions were ordered to be instituted in 21 cases. In 12 of these the parties were convicted and punished; and in 9 the proceedings were abandoned, the parties (in most instances) paying the costs of court and complying with the law.

The following offences are included in the cases dealt with:—Neglect to Register Births; neglect to Register Deaths; neglect to furnish Certificate of Marriage; giving false information when registering births and deaths; failure to comply with requisitions to correct entries; failure of Registrar to deliver certified copies of entries to Superintendent Registrar.

To meet legal charges a sum of £120 was provided in the estimates. During the year the total cost of the legal service of the Department was £37 18s. 8d., of which sum £23 0s. 6d. was paid for local professional assistance, and £14 18s. 0d. for mileage to the Registrars.

MARRIAGES.

The number of Marriages registered during the year was 22,961, being equal to 5.22 per 1,000 of the estimated population,* a rate which is 0.01 above that for the previous year, 0.21 above the average for the ten years 1894-1903, and higher than the rate for any of these years.

Of the 22,961 Marriages registered during last year, 16,165 were between Roman Catholics; 3,590 were celebrated according to the rites and ceremonies of the Church of Ireland; 2,267 were in Presbyterian Meeting-houses; 549 in "Registered Buildings" belonging to various religious denominations; only 375 by civil contract in the Registrars' offices; 8 were according to the usages of the Society of Friends; and 7 according to the Jewish rites.

The rate represented by the number of Roman Catholic Marriages is 4.95 per 1,000 of the estimated number of Roman Catholics, being 0.33 over the corresponding average rate for the preceding ten years, and higher than the Roman Catholic Marriage rate for any of these years; and the other Marriages represent a rate of 5.99 per 1,000 of all persons other than Roman Catholics in the population, this rate being 0.19 under the corresponding average rate.

Of the 3,590 Marriages according to the rites of the Church of Ireland, 43 were by special licence, 3,079 by licence, 439 after the publication of banns, 3 on Registrar's certificate, and in 26 instances there was no information afforded as to which of these methods was adopted.

* The rates for the total of Ireland and for the County Boroughs of Dublin and Belfast are based on the estimated population in the middle of the respective years, those for Provinces for the years 1890-1904, and for Counties for the year 1904 on the population according to the Census of 1901, and those for the Provinces for the years 1895-1899 on the population according to the Census of 1891. The Provinces and Counties adopted for 1894-1904 are the areas as constituted after alterations made under the Local Government (Ireland) Act, 1898.

Of the total marriages 88·9 per cent. were those of bachelors with spinsters; 6·9 per cent. those of widowers and spinsters; 2·4 per cent. of bachelors and widows; and 1·8 per cent. were those of widowers and widows. Thus of the men married 8·7 per cent. were widowers, and 4·2 per cent. of the women were widows; and in 11 instances, in every 100 marriages, one or both of the contracting parties had been in the married state before.

TABLE V.—Showing, by QUARTERLY PERIODS, the number of MARRIAGES registered in Ireland in each of the eleven years 1894-1904, and the average number for the ten years 1894-1903, distinguishing the number of Roman Catholic Marriages registered under the 25 & 27 Vic., cap. 90, and of Protestant and other marriages under the 7 & 8 Vic., cap. 81.

It is a matter for regret that in the great majority of instances the ages of the persons married are not stated, as a complete record of the ages of the persons married would be valuable. The requirements of the law are technically complied with by the entry in the age column of "minor" or of "full age," as the case may be, and there seems to be a general and increasing inclination to take advantage of this circumstance, as in 1904 the ages of both parties were specified in 3,132 cases only, being less than one-seventh of the total number of marriages. In the year 1865, when 30,802 marriages were registered, the ages of both parties were given in 13,910 instances.

Of 22,961 men married during the year, 340, or 1·48 per cent., were minors; and of the women married 1,452, or 6·32 per cent., were under age.

Of those married under age in 1904 the highest proportion of husbands (1·98 per cent.) and of wives (7·90 per cent.) was in the province of Ulster.

I may add that the per-centage of persons married in Ireland, who were under age, is very far below the corresponding rates in England and Scotland.

The signatures of the contracting persons, as seen in the marriage registers or certificates, afford a rough test of the progress of elementary education. In the year 1904, 20,584, or 89·6 per cent., of the husbands, and 21,122, or 92·0 per cent., of the wives, wrote their names, and the remainder signed by marks.

It is apparent from these figures that there is a considerable improvement, when compared with the corresponding results in the first of the preceding ten years, the per-centage of persons married in 1894 who wrote their names, being—men 82.9, and women 88.5; and they exhibit a great advance when compared with the per-centage for the year 1864, when the general registration of marriages in Ireland was established, in which year but 61 in every 100 men, and 50 in every 100 women married, wrote their names.

For men the per-centages range for the several provinces last year from 86 in Connaught to 92 in Munster; and, for women, from 90 in Ulster to 94 in Leinster and Munster.

In 751 cases both of the persons married signed the register by "mark," and in 2,714 the register was thus signed by either the husband or the wife, so that in 3,465 cases, or 15.1 per cent. of the total number of marriages, one or both of the parties signed by mark; and in 19,496 or 84.9 per cent., both parties wrote their names.

The proportion per cent. of persons married in each of the eleven years 1894-1904, who wrote their names in the registers or certificates; of minors; of widowers; and of widows; is given for Ireland, and for each of the four provinces in the following Table.

TABLE VI.—Showing, as regards the **Marriages** in Ireland, and in each of the Four Provinces, during the years 1894-1904, the proportion per cent. of Persons who **signed their names**, of Persons **not of Full Age**, and of **Re-marriages**.

In proportion to population at all ages, the marriages registered were most numerous in the province of Ulster, in which, however, the rate was only 5·6 per 1,000 of the population, according to the Census of 1901; Leinster comes next with 5·5 per 1,000; Munster third, with 4·7 per 1,000; and Connaught last, the rate being 4·2 per 1,000.

The highest County, or County Borough, marriage rate (7·7 per 1,000 of the population) was in the County Borough of Dublin; and the lowest 3·3 in Clare County. Between these the most favourable rates were 7·5 for the County Borough of Belfast, 5·8 for Dublin County, and 5·7 for Londonderry County and County Borough; and the least so 3·7 for Longford County, 3·8 for Galway County, and 3·9 for Queen's County.

BIRTHS.

The births registered during the year 1904 numbered 103,811—53,155 boys and 50,656 girls, or 104·9 of the former to every 100 of the latter—the rate afforded in proportion to the estimated population being 1 in 42·4, or 23·6 per thousand, which is 0·5 above the average rate per 1,000 for the ten years, 1894-1903.

Of the 103,811 children whose births were registered in Ireland during the year 1904, 101,177, or 97·5 per cent. were legitimate, and 2,634, or 2·5 per cent., were illegitimate, being 0·1 under the corresponding average per-centages for the preceding 10 years. These results compare favourably with the returns for most other countries.

The number of male children born in wedlock during the year was 51,819 and of female, 49,358, being 105·0 of the former to every 100 of the latter; of the illegitimate children 1,336 were males, and 1,298 females, or 102·9 boys to 100 girls.

The per-centage of children born in Ulster who were illegitimate, was 3·4; in Leinster, 2·6; in Munster, 2·2; and in Connaught 0·7, as appears from Table VII.

TABLE VII.—The Per-centage of **Legitimate** and of **Illegitimate** Births registered in Ireland during the years 1900-1904 by Province.

Provinces	Proportion per cent. of Legitimate Births					Proportion per cent. of Illegitimate Births				
	1900	1901	1902	1903	1904	1900	1901	1902	1903	1904
IRELAND	97·2	97·4	97·4	97·4	97·5	2·8	2·6	2·6	2·6	2·5
LEINSTER	97·2	97·3	97·2	97·4	97·4	2·7	2·7	2·8	2·6	2·6
MUNSTER	97·1	97·0	97·5	97·7	97·8	2·9	2·9	2·5	2·4	2·2
ULSTER	96·4	96·6	96·8	97·1	96·6	3·5	3·4	3·2	2·8	3·4
CONNAUGHT	99·1	99·2	99·2	99·2	99·3	0·9	0·7	0·7	0·7	0·7

The total birth-rates for the respective provinces in 1904 were—for Leinster, 23·6 per 1,000 of the population in 1901; Munster, 22·5; Ulster, 24·4; and for Connaught, 21·4.

The four highest birth-rates were in Dublin County Borough, 32·5; Belfast County Borough, 31·7; and Kerry County and Londonderry County and County Borough, 24·4. The lowest rates were Caran County, 18·6; King's, 18·7; Roscommon County, 19·0; and Tipperary N.R., 19·2.

Of the total births, 51·7 per cent. were registered in the first six months of the year (182 days), and 48·3 per cent. in the second half of the year (184 days).

The number registered in the first quarter was 26,721; in the second, 26,916; in the third, 25,668; and in the fourth, 24,506.

DEATHS.

The number of deaths (79,513) registered during the year, is equal to 1 in 55, or 18·1 per 1,000 of the estimated population. The deaths of males amounted to 39,330, and those of females to 40,183, the rate per 1,000 males and 1,000 females, respectively, being 18·0 and 18·1.

The death-rate (18·1) is 0·6 above that for the year 1903, and 0·1 over the average rate for the preceding ten years.

According to custom valuable notes on the sanitary condition of their respective districts were furnished by many of the Registrars with their Quarterly Reports. These notes were published in the Quarterly Returns issued from this Department, and it is to be hoped that they received the serious attention of the various Local Authorities entrusted with the administration of the Public Health Acts.

The recorded death-rates for the four provinces show, that for Connaught to be 15·0; for Munster 16·7; for Ulster, 18·3; and for Leinster, 19·8 per 1,000 of their respective populations in 1901.

The following five County, or County Borough, areas have the lowest registered mortality :—Kerry County, 13·7; Mayo, 13·9; Leitrim, 14·3; Clare, 14·4; and Roscommon, 14·5.

Those having the highest rate are—Duhlin County Borough, 26·0; Belfast County Borough, 21·2; Wexford County, 20·3; Armagh County, 20·0; and Tipperary S.R., 19·0

The deaths registered in the first half of the year generally outnumber those in the second. Of the total deaths in 1904, 56·7 per cent. were registered in the six months, January to June inclusive; and 42·3 per cent. in the remaining six months of the year.

The deaths registered in each quarter are represented by the following annual rates :—First quarter, 22·1 per 1,000 of the population; second, 18·8; third, 14·8; and fourth, 16·5. The rate for the first quarter is 0·3 above, the third equal to, and the second and fourth, respectively, 0·1 below the corresponding average rates for the respective quarters in the ten years 1894-1903.

It will be seen from the table on pp. 162-171, that of the 79,513 deaths registered during the year, 2,991 took place in Infirmarys and General and Special Hospitals; 1,468 in Public Lunatic Asylums; 10,709 in Workhouses and Workhouse Hospitals; and 64,345 were of persons who died "At their Own Homes, &c."

Of the total number of deaths, those in "Infirmarys and General and Special Hospitals" constitute 3·8 per cent., the per-centages for the four provinces varying from 0·6 in Connaught to 8·4 in Leinster. More than thirteen per cent. of the deaths registered occurred in Workhouses or Workhouse Hospitals, the respective per-centages for the provinces being—Leinster, 15·6; Munster, 18·2; Ulster, 10·1; and Connaught, 9·8.

CAUSES OF DEATH.

The arrangement of the Causes of Death adopted in this Report is that of the official Nomenclature of Diseases, 1896, with some modifications which have been approved of after consultation with the Royal College of Physicians of Ireland and with the Registrars-General of England and Wales and of Scotland.

Diagram No. 2, facing this page, shows the relative mortality from twenty-two of the principal causes of death in Ireland in the year 1904. The highest numbers of deaths were from all forms of tuberculous disease, 12,694; from old age, 9,842; from heart diseases, 8,272; and from bronchitis, 8,052, represented by rates of 2.88, 2.24, 1.88, and 1.83 per 1,000 of the estimated population.

GENERAL DISEASES.

Small-pox.—There were sixteen deaths from small-pox registered for the whole of Ireland during the year 1904, and of these deaths 13 were of males and 3 were of females; of the total deaths, 13 were registered in the Province of Ulster, 8 being in the Registrar's District of Ballylesson, in Lisburn Union, where the small-pox hospital for the County Borough of Belfast is situated; two deaths were registered in Armagh Union; and in each of the Unions of Irvinestown, Lismavady, and Lurgan one death from small-pox occurred. In the Province of Connaught there were three deaths, which occurred in the Union of Westport.

The Provinces of Leinster and Munster were free from any record of mortality from the disease for the year 1904.

As regards the seasonal distribution of the 16 deaths, 4 were registered in March Quarter, 2 in June Quarter, 4 in September Quarter, and 6 in December Quarter.

The number of deaths from small-pox which were registered in Ireland in the 10 years preceding 1904 are given in Table IX., page 10. It may there be seen that with the exception of the years 1894, 1895, and 1903, the country was almost free from mortality from small-pox, the deaths registered in the above-mentioned years being 72, 146, and 40 respectively.

The Abstracts on pages 138 and 139 contain certain information with reference to the state of vaccination of the 16 persons who succumbed to small-pox. Four were stated to be vaccinated in infancy, their ages at death being, respectively, 24, 35, 40, and 68 years; 10 were reported never vaccinated; and concerning the condition of two persons it was considered doubtful whether they were vaccinated or not.

The following TABLE (IX.) shows (1) the Number of Deaths from All Causes, and from with the Average Annual Number for the ten years 1894-1903; and (2) the respective

NOTE.—In this Table the figures for the years 1903, 1902, and 1901
The figures for the years 1894-1901 have been

YEAR	Total Number of Deaths	CAUSES OF DEATH												
		A.—GENERAL DECAUSE												
		Small pox.	Measles.	Scarlet Fever.	Typhus.	Infantile.	Whooping-cough.	Diphtheria.	Pneumonia (all forms).	Erysipelas.	Burns and Scalds.	Profoundly Septic Diseases.	Tuberculosis (all forms).	Tuberculosis (Pulmonary and other).

*The rates for the years 1895-1904 for the Provinces are based on the Census of 1891, and for the years 1900-1904 on the Census of 1901. See (i) Note on page 3.

Regarding the responsibility of the physician who certifies to the deaths of persons from small-pox, the following extract from Dr. Tatham's letter to the Registrar-General for England and Wales, in his Annual Report for the year 1903, is worthy of perusal:—

"In order that full particulars might be accessible regarding the influence of vaccination on small-pox, it was greatly to be desired that in certifying deaths from small-pox medical practitioners should specify the patient's condition with respect to vaccination—say by one or other of the following phrases, as the case may be:—(1) No evidence of vaccination; (2) Vaccination in infancy only—number of scars; (3) Vaccination only after infection by small-pox; (4) Stated to have been vaccinated, but no scars. If the patient has been re-vaccinated, the date of re-vaccination should be given where possible."

Measles.—The deaths from measles numbered 522—males 252 and females 270—corresponding to a rate of 0·12 per 1,000 of the estimated population of Ireland, the average rate for the years 1894-1903 being 0·17 per 1,000.

Of the 522 deaths, there were 457 of children under 5 years of age (of males 224, and of females 233).

Deaths from measles in the Provinces were registered as follows:—In Leinster, 223 deaths; in Munster, 51 deaths; in Ulster, 218 deaths; and in Connaught, 30 deaths.

Of the total deaths from measles 463, or about 77 per cent., were registered in the following Unions:—Belfast (201); Dublin North (55); Dublin South (134), and Ennis-corthy (13). A retrospect of the 10 years which precede that under notice shows that in the years 1894, 1897, 1899 and 1902, the deaths from measles amounted to over 1,000, being 1,215, 1,070, 1,532, and 1,076 respectively; and in the years 1895, 1898, and 1901 the deaths from measles were under 500, being 301, 316 and 459 respectively.

From Table X. it may be observed that for the Province of Leinster the highest death rate for measles in the decennial period (1895-1904) was 0·63 per 1,000 in the year 1899, and that the lowest death rate in that period for Leinster was 0·01 per 1,000 in the year 1895. In Munster the highest rate (0·39 per 1,000) was recorded in the year 1899, and the lowest rate (0·02 per 1,000) in the year 1895; in Ulster the highest rate for the decennium was recorded in the year 1902, namely, 0·80 per 1,000, and the lowest (0·06 per 1,000) in 1898; while in Connaught the highest rate (0·16 per 1,000) afforded by deaths from measles was recorded in the year 1898, and the lowest rate (0·01 per 1,000) in 1902.

Scarlet Fever.—The deaths from scarlet fever numbered 264, being 6 under the number in 1903, and 180 under the average for the 10 years 1894-1903. The highest rate recorded in the decennial period was 0·17 per 1,000 in the year 1896, and the lowest annual rate was 0·04 per 1,000 of the estimated population of Ireland in the year 1902.

Of the deaths from scarlet fever, 106 were those of males, and 98 were of females.

The deaths of 97 children under 5 years of age (about 47·5 of the total) were recorded.

One or more deaths from scarlet fever were reported from 31 Counties and County Boroughs, but in the Counties of Carlow, Kerry, Tipperary S.R. and Leitrim, no death was registered during the year. There were 23 deaths in Dublin County Borough, 20 in Belfast County Borough, 21 in the County of Mayo, 18 in Wexford, 11 in Galway, and 10 in the County and County Borough of Cork.

From Table X. it appears that in the Provinces the number of deaths from scarlet fever was, respectively, in Leinster 77, in Munster 16, in Ulster 74, and in Connaught 37.

Typhus.—A retrospect of three decennial periods, namely, 1871-1880, 1881-1890, and 1891-1900, reveals a largely reduced mortality from typhus. In the first of these decades 7,495 deaths were registered from this disease, in the second 5,457, and in the third 1,994 deaths were registered; in each of the 4 years commencing with the year 1901 the deaths from typhus were 92, 83, 77 and 53, respectively, the latter figure being the lowest that has ever been recorded in Ireland.

Particulars concerning the deaths in 1904 as regards ages, sexes and the Unions, Counties and Provinces in which they were registered, will be found in the Abstracts at the conclusion of this Report, commencing with page 128.

Influenza.—Prior to the year 1889 the mortality from "influenza" was not one of the principal features of the Vital Statistics of Ireland, the annual average number of deaths, thus assigned, from the year 1864 to the year 1890, being 108;

however, from, and including, the year 1890, to the period now the subject of review the mortality from influenza has become a formidable, although irregular, factor in augmenting the mortality rate of Ireland; the deaths recorded in the year 1904 were, in number, 1,184, being far more numerous than deaths from any of the principal epidemic diseases, excepting whooping-cough (1,551) in that period; the 1,184 deaths are equivalent to an annual rate of 0·27 per 1,000 of the estimated population of Ireland. For the four Provinces, the annual rates based on their respective Census (1901) populations were:—Leinster 0·26 per 1,000, Munster 0·20 per 1,000, Ulster 0·26 per 1,000, and Connaught 0·41 per 1,000. Deaths from influenza varied from 7 (the lowest number) in the County Clare, and 9 in each of the Counties of Louth and Fermanagh, to 86 deaths in the County of Donegal, 93 in the County of Galway, and 97 deaths (the highest number of deaths from influenza registered in any County in the year 1904) in Cork County and Cork County Borough.

In the following Unions, or Superintendent Registrar's Districts, 20 or more deaths from influenza were registered, viz.:—In Dublin North 47; in Belfast 45; in Galway 41; in Dublin South 36; in Cork 31; 28 in each of Magherafelt and Swineford Unions; 27 in Dungannon; 26 in each of the Unions of Inishowen and Oughterard; 24 in Downpatrick; 23 in Mohill; 22 in Boyle; 21 in Dingle; and 20 in Tullamore Union. In 20 Unions there was no record of death from influenza.

A perusal of the Abstract Tables dealing with deaths by diseases, sexes and ages, will show that no age period is exempt from the effects of the disease. Out of the total (1,184) there were 144 deaths of children under 5 years of age (of males 85 and of females 59).

Whooping-cough.—The deaths from whooping-cough, amounting to 1,551 (of males 689 and of females 862) were equal to a rate of 0·35 per 1,000 of the population, estimated to the end of June 1904; the deaths of males, numbering 689, equal a rate of 0·32 per 1,000 males living, and the deaths of females, numbering 862, equal a rate of 0·39 per 1,000 females living. The average annual rate for the decennium, 1894-1903, is 0·26 per 1,000; the highest rate recorded in that decennial period was in the year 1897, when it was 0·41 per 1,000, and the lowest recorded rate during that period was in the year 1900, viz., 0·15 per 1,000. Of the total deaths (1,551), there were 1,451 of children under 5 years of age (of males 649, and of females 802), and of the deaths of children under 5 years of age (1,451) there were 685 of infants under 1 year—of males 358 and of females 347.

There were 431 deaths from whooping-cough in the province of Leinster, corresponding to an annual death rate of 0·37 per 1,000 of the Census (1901) population; there were 311 deaths in Munster, equal to a rate of 0·29 per 1,000; in Ulster there were 672 deaths, with a rate of 0·43 per 1,000; and in Connaught the deaths (137) represent an annual rate of 0·21 per 1,000.

The distribution of the deaths from whooping-cough varied from 285 deaths in Belfast County Borough, 217 in Dublin County Borough, 103 in Cork County and County Borough, 79 in Limerick County and County Borough, 76 in the County Down, and 74 in each of the Counties of Antrim and Galway, to 2 deaths in Louth, 4 deaths in each of the Counties of Kilkenny and Leitrim, 5 in Cavan, 6 in Westmeath, and 8 in the County of Fermanagh.

Diphtheria.—The deaths from diphtheria, including deaths certified as membranous croup, varied in the decennium (1894-1903) from 305 in the year 1895, to 421 in the year 1902. The number for the year 1904 is very close to the lowest record of the preceding ten years, being 317 deaths (of males 161 and of females 156). Of the total (317) there were 171 deaths of children under 5 years of age, 94 being of males and 77 of females.

In the Province of Leinster the number of deaths from diphtheria was 97, in Munster 43, in Ulster 132, and in Connaught 45.

About twenty per cent. of the deaths from diphtheria were registered in the County Boroughs of Dublin and Belfast, 32 deaths being registered in each of the two principal cities in Ireland. There were 24 deaths registered in the County Down, 21 in Londonderry County (including Londonderry County Borough), 18 in the County Mayo, 17 in the County Antrim, and 14 in Cork County (including Cork County Borough). The lowest recorded mortality from diphtheria is in Meath County, where only one death was registered, in Louth and Westmeath two deaths each, and three deaths each in King's County, County Limerick (including Limerick County Borough), and County Waterford (including Waterford County Borough).

TABLE XL.—Showing, by Provinces, Counties, &c., the number of Deaths from Influenza at each of five Age-Periods registered in Ireland during the year 1904, with the rate per 10,000 of the population* represented by the deaths at all ages.

PROVINCE, COUNTY, &c.		Population in 1901.	No. of Deaths from Influenza.						Total.	Rate per 10,000 of Popul. Area.

* See Note (*) on page 2

In the Abstracts commencing with page 138, it may be seen that four deaths from membranous laryngitis (non-diphtheritic), 268 deaths from croup (not spasmodic or membranous), and 28 deaths which were stated to be due to laryngismus stridulus, were registered in the year 1904.

Enteric Fever.—The annual death rate from enteric fever (typhoid fever) which for the year 1903 was 0.109 per 1,000 of the estimated population, and the lowest that had been recorded in Ireland, further declined in the year 1904 to 0.106 per 1,000. In the year 1898, the rate for enteric fever was 0.28 per 1,000, which is the highest rate for Ireland that has been published in the annals of the Vital Statistics of the country. The rate for 1904 represents the deaths of 466 persons (of males 245 and of females 221). There were 113 deaths (of males 68, and of females 45) of persons between the ages of 25 and 35 years; this number is over 24 per cent of the total deaths from enteric fever. The mortality recorded from this disease at the earlier periods of life was, for children under 5 years, 24 deaths, and for those between the ages of 5 and 10 years 33 deaths. The rates representing the mortality for the provincial areas of Ireland were—for Leinster 0.11 per 1,000, for Munster 0.09 per 1,000, for Ulster 0.13 per 1,000, and for Connaught 0.05 per 1,000.

In the County Boroughs of Dublin and Belfast the deaths registered from enteric fever were, respectively, 67 and 115, being collectively 39 per cent of the total deaths from enteric fever. In the Counties of Cork, Limerick, and Londonderry, which severally contain the County Boroughs, the deaths from enteric fever were 47, 14, and 13, respectively. Among the other Counties there were 16 deaths in Tyrone, 15 in each of Antrim and Down, 13 in Armagh, and 11 deaths in each of the County Donegal and County Kerry. The counties with the least number of deaths registered from enteric fever were—Carlow (1), Kilkenny (2), Queen's County (2), Longford (3), Meath (3), Wicklow (3), and Fermanagh (3).

Forty-eight deaths were classified as *Pyæmia* (origin uncertain), which include those returned as *simple fever*, *continued fever*, or *ill-defined fever*.

TABLE XII.—Showing for the year 1904 the Deaths from the several forms of *Fever* at each Age-Period with the proportion to the number of the living at each Age represented thereby.

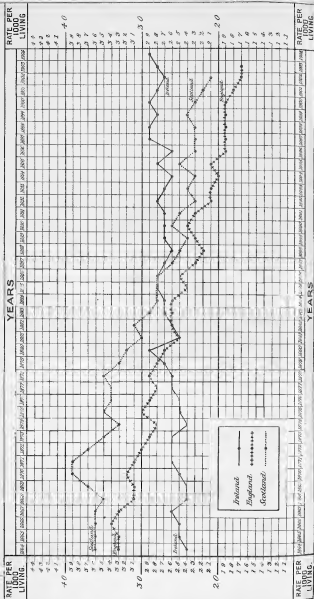

AGE PERIODS	DEATHS FROM FEVER												No. of Deaths to 100,000 of the living at same age.
	Typhoid			Typhoid or Enterica			+ Pyæmia (Origin uncertain)			TOTAL			
	M	F	Total	M	F	Total	M	F	Total	M	F	Total

Total	33	31	64	345	392	737	37	22	59	384	373	757	29.93

Diarrhoeal Diseases.—The deaths which were assigned to epidemic diarrhoea, infective enteritis, to diarrhoea (not otherwise defined), and to dysentery, are grouped under the head of diarrhoeal diseases. The total number of deaths classified in this manner was 1,318. This figure does not include deaths which were returned as being caused by *gastro-enteritis* (293) and *enteritis* (not epidemic) 391. (Neither of the latter terms should be used to describe deaths which have been caused by epidemic or infective diarrhoea). Of the deaths (1,318) from diarrhoeal diseases, 960 were returned as epidemic or infective diarrhoea (of males 187 and of females 173), 923 were classified to *diarrhoea* (not otherwise defined), 469 of the latter being deaths of males, and 464 of females; and 85 deaths were returned as being caused by dysentery (of males 18 and of females 17).

* Called "Simple Continued Fever" in Reports for previous years

TUBERCULOSIS.

DIAGRAM No 3 Showing the Death-rate in Ireland, as compared with England and Scotland, during each of the forty-one years 1864-1904.

The destructive effect of this group of disease upon infant life appears from observations of the figures in the Abstracts, commencing on page 188; from these it appears that 968, or more than 78 per cent. of the total (1,318), were of children under 5 years of age. On further inquiry into the Abstracts it is seen that the County Boroughs of Dublin and Belfast, and the 4 counties containing County Boroughs account for 784 of the total deaths, this figure being more than 59 per cent. of the total mortality from diarrhoeal diseases.

Table IX, page 10, shows the rate for diarrhoeal diseases for the year 1904, to be 0.30 per 1,000 (25.9 per 100,000). The average rate for the 10 years (1894-1903) 0.36 per 1,000 (36.2 per 100,000), and the rate in the year 1903 to be 0.25 per 1,000 (24.8 per 100,000). From Table X, page 12, it will be observed that the provincial death rates for diarrhoeal diseases in 1904 were, respectively, for Leinster 0.38 per 1,000, for Munster 0.24 per 1,000, for Ulster 0.35 per 1,000, and for Connaught, 0.09 per 1,000 of the Census (1901) population of each of these areas.

Rabies, Hydrophobia.—There has not been a record of death from rabies in Ireland since the year 1898.

Septicæmia, Septic Intoxication, Pyæmia (not puerperal), etc.—From the Abstracts it appears that erysipelas caused the deaths of 126 persons (of males 78 and of females 58); septicæmia, septic intoxication caused 87 deaths (of males 51 and of females 36); and 25 males were reported to have died from pyæmia, as well as 10 females from the same cause.

Puerperal Septic Diseases.—The deaths in this group are returned as puerperal septicæmia, puerperal pyæmia, phlegmasia alba dolens, and puerperal fever (the latter term should be avoided, as being indefinite). The deaths were returned thus:—From puerperal septicæmia 137, from puerperal pyæmia 6, from phlegmasia alba dolens 10, from puerperal fever 63, making a total of 216 deaths of women from septic conditions, consequent on pregnancy and childbirth. Further reference is made to the deaths of women from puerperal septic diseases in the paragraph concerning the deaths of women which occur from the accidents of childbirth, other than those caused by septic conditions.

Pneumonia.—The records for the year 1904 are the first in which lobar pneumonia, broncho pneumonia, and pneumonia (not defined) are placed in a group with epidemic pneumonia, among the General Diseases, these having been in previous years classified with the diseases of the respiratory system. This course was adopted, following the Registrar-General for England and Wales, and with the approval of the President and Fellows of the Royal College of Physicians of Ireland.

The deaths in the group above-mentioned amounted to 3,755, representing a rate of 0.85 per 1,000 of the estimated population, as against a rate of 0.79 per 1,000 in the year 1903, and an average rate of 0.79 for the 10 years (1894-1903). The deaths were returned as follow:—From lobar pneumonia 124 (of males 71 and of females 53); from broncho-pneumonia 1,159 (of males 614 and of females 525); from epidemic pneumonia 3 deaths (of males 2 and of females one death); and from pneumonia (not defined) 2,489 deaths (of males 1,475 and of females 1,014).

TUBERCULOUS DISEASE.

It is a grave responsibility which devolves on me to report to Your Excellency that the death rate from the aggregate of all forms of Tuberculous disease, has again reached the maximum of 2.9 per 1,000 of the population of Ireland, estimated to the 30th June, 1904.

From Table XIV. it appears that this high rate was also reached in the years 1880, 1897, 1898, and 1900.

The annual rate of 2.9 per 1,000 represents the deaths of 12,694 persons (of males 6,257 and of females 6,437) during the year.

The death rates for the provincial areas from all forms of tuberculous disease were for Leinster 3.3 per 1,000, for Munster 2.8 per 1,000, for Ulster 2.9 per 1,000, and for Connaught 2.0 per 1,000.

In the County Boroughs of Dublin and of Belfast, the rates for deaths from all forms of tuberculous disease were, respectively, 4.7 per 1,000 and 4.1 per 1,000 of the estimated populations of those cities; and for the counties containing the County Boroughs of Cork,

* These deaths are included in the general tables of Causes of Death

DIAGRAM No. 4.—Showing the relative percentage of mortality from the principal forms of Tuberculous Disease in Ireland, during the year 1904

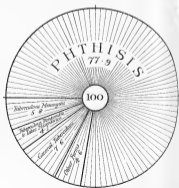

TOTAL—Males and Females.

MALES

FEMALES.

Limerick, Londonderry, and Waterford, the rates for all forms of the disease were, respectively, 3·4 per 1,000, 3·0 per 1,000, 2·8 per 1,000, and 3·1 per 1,000 of the populations of these counties, according to the Census of 1901.

It may be here observed that the deaths from this disease in Ireland, in the aggregate, amount to 16 per cent of the total deaths from all causes for the year 1904.

Details regarding the ages, the sexes, and distribution of the deaths by Provinces, Counties and Unions, are given in the Abstracts, commencing on page 138 of this Report.

The deaths from all forms of tuberculous disease are arranged under certain headings, and an examination of Table XIV and of the Abstracts shows that there were 9,833 deaths (of males 4,817 and of females 5,016), in Ireland from tuberculous phthisis and *pneumonia*, the total (9,833) representing a rate of 2·23 per 1,000 of the estimated population; there were 740 deaths from tuberculous meningitis (of males 370 and of females 370 deaths), the total of both sexes being equal to an annual death-rate of 0·17 per 1,000 of the estimated population; there were 375 deaths (of males 181 and of females 144) from tuberculous peritonitis; and 238 deaths from *tuberculosis mesenterica* (of males 115 and of females 123) were returned—the deaths from tuberculous peritonitis and *tuberculosis mesenterica*, combined, amounting to 513, equivalent to an annual death-rate of 0·12 per 1,000 of the estimated population; there were 1,608 deaths from other forms of tuberculosis, *scrophula*, which collectively represent a rate of 0·37 per 1,000 of the estimated population of Ireland.

In addition to the information which is given in the Abstracts and in Tables IX. and XIV in the Text relating to the mortality from tuberculous disease in Ireland, I have the honour to bring under your Excellency's notice the diagrammatic methods which I have adopted to give prominence to this important, but undesirable, feature in the mortality records of the country. In Diagram No. 2, facing page 9, the column representing the mortality from tuberculous disease is seen to tower above the columns representing the 21 other principal causes of death.

In Diagram No. 3, facing page 17 a comparison is shown of the rates representing the total deaths from all forms of tuberculous disease in Ireland, as compared with England and Scotland, from the year 1864 to the year 1904. It will be observed from this diagram that while in England the rate has fallen from 3·3 per 1,000 for the year 1864 to 1·7 per 1,000 of the population for the year 1903, and while in Scotland the rate has fallen from 3·6 per 1,000 in 1864 to 2·1 per 1,000 in 1903, in Ireland the death-rate from all forms of tuberculous disease has risen from 2·4 per 1,000 of the population in 1864 to 2·7 in 1902, to 2·8 in 1903, and to 2·9 per 1,000 in the year 1904.

In Diagram No. 4, facing this page I have shown according to the graphic method the percentage relation of the deaths from the principal groups of tuberculous disease to each other, as well as the percentage relations for the deaths in each group, of males and of females respectively. The following statement gives similar information in tabular form:—

GROUPS.	Number of deaths in each group to every 100 deaths from all forms of Tuberculous Disease recorded in Ireland in 1904.		
	Males.	Females.	Total.
1. Tuberculous Phthisis, <i>Phthisis</i>	770	779	775
2. Tuberculous Meningitis	59	58	59
3. Tuberculous Peritonitis, <i>Tuberculosis Mesenterica</i>	39	41	40
4. General Tuberculosis	76	76	76
5. Tuberculosis of other Organs, <i>Scrophula</i>	56	48	50
Totals	1000	1000	1000

From the foregoing statement it appears that, of the total deaths registered from tuberculous disease, 77·5 per cent. were from the pulmonary form of the malady, and that the percentage among males (77·0) was a little lower than among females, the percentage of the latter deaths being 77·9. The corresponding percentage for deaths from tuberculous meningitis was 5·9, for males the same, and for females 5·8.

TABLE XIV.—Showing the Number of Deaths from the following causes, viz., Tuberculous Phthisis and Phthisis Tuberculosis Meningitis, Tuberculous Peritonitis and *Tuberc Mesenterica*, Other Forms of Tuberculosis Scrofula, and from all causes, registered in Ireland in each of the thirty-four years 1871-1904, with the Rate per 1,000 of Estimated Population represented by (a) Deaths from the above-mentioned forms of Tuberculosis, (b) Deaths from All Causes, and the per-centage of total Deaths caused by the tuberculous diseases referred to.

Years.	Number of Deaths from				Total Deaths from all the foregoing causes		Total Deaths from all causes		Per-centage of Deaths caused by the Diseases named in Columns 1, 2, 3, & 4.
	Tuberculous Phthisis and Phthisis Tuberculosis	Tuberculous Meningitis	Tuberculous Peritonitis and Tuberc Mesenterica	Other Forms of Tuberculosis, Scrofula.	Number	Rate per 1,000 of Estimated Population.	Number	Rate per 1,000	
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)
1871	16,077	1,123	1,395	351	18,926	24	86,366	18.4	13.9

1900	15,000	811	900	1,800	17,511	21.5	90,842	20.5	14.8
Average for 10 years, 1891-1900	15,000.0	811.0	900.0	1,800.0	17,511.0	21.5	90,842.0	20.5	14.8
1901	15,000	811	900	1,800	17,511	21.5	90,842	20.5	14.8
1902	15,000	811	900	1,800	17,511	21.5	90,842	20.5	14.8
1903	15,000	811	900	1,800	17,511	21.5	90,842	20.5	14.8
Average for 5 years, 1901-1905	15,000.0	811.0	900.0	1,800.0	17,511.0	21.5	90,842.0	20.5	14.8
1904	15,000	811	900	1,800	17,511	21.5	90,842	20.5	14.8
Average for 34 years, 1871-1904	16,059.5	912.5	1,589.5	1,894	19,555.5	24.7	90,614.5	20.1	14.9
2004	1,000	500	500	1,000	3,000	2.0	70,000	10.1	15.0

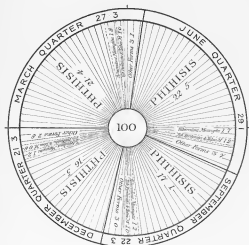

For tuberculous peritonitis and *tuberc mesenterica* the percentage was 4.0; for males 3.9, and for females 4.1 per cent.

The percentage for general tuberculosis was the same in each division, namely, 7.6, and for other forms of tuberculous disease the percentages were—for total deaths, for deaths of males, and deaths of females, 5.0, 5.6 and 4.6, respectively.

The Diagram, No. 5, facing page 21 represents the seasonal distribution of all deaths (as registered during each quarter) from tuberculous disease, showing the relation which the deaths of males and of females, from four principal groups, bear to each other in each quarter of the year. The information which this diagram affords is also given in the following Tabular Statements A, B and C.

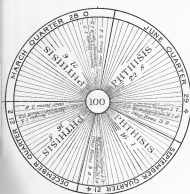

DIAGRAM No. 5.—Showing by Quarters the relative mortality from all forms of Tuberculous Disease; also the relative mortality in each quarter from certain groups of Tuberculous Disease in Ireland, in the year 1904.

TOTAL—Males and Females.

MALES.

FEMALES.

TABULAR STATEMENT A.—Showing by Quarterly Periods the relative mortality represented by Deaths of all Persons registered in Ireland from the principal groups of Tuberculous Disease, and the percentage mortality in each group to the total number of deaths from all forms of Tuberculous Disease registered during the Year 1904.

GROUPS	March Quarter	June Quarter	September Quarter	December Quarter	Year 1904
1. Tuberculous Phthisis, Phthisis	21.4	22.5	17.1	16.5	77.5
2. Tuberculous Meningitis	1.8	1.7	1.3	1.2	5.9
3. Tuberculous Peritonitis, <i>Tuberculous Mesenterica</i>	1.0	1.2	1.0	0.8	4.0
4. Other forms of Tuberculous Disease	3.1	3.7	3.0	2.8	12.6
Totals	27.3	29.1	22.4	21.3	100.0

From the above it appears that in June quarter the number of deaths from tuberculous phthisis and *phtisis* to every 100 deaths from all forms of tuberculous disease recorded in Ireland in 1904 was 22.5, in March Quarter 21.4, in September Quarter 17.1, and in December Quarter 16.5; that the percentage for tuberculous meningitis was 1.8 in March Quarter, 1.7 in June Quarter, and 1.2 in each of September and December Quarters; that the corresponding percentage for tuberculous peritonitis and *tuberculous mesenterica*, was 1.2 in June Quarter, 1.0 in each of the March and September Quarters, and 0.8 in the December Quarter of the year; and that for the total deaths from other forms of tuberculous disease the percentage in June Quarter was 3.7, in March it was 3.1, in September Quarter it was 3.0, and in December it was 2.8.

TABULAR STATEMENT B.—Showing by Quarterly Periods the relative mortality represented by Deaths of Males registered in Ireland from the principal groups of Tuberculous Disease, and the percentage mortality in each group to the total number of deaths from all forms of Tuberculous Disease registered during the Year 1904.

GROUPS	March Quarter	June Quarter	September Quarter	December Quarter	Year 1904
1. Tuberculous Phthisis, Phthisis	21.6	22.8	18.1	18.3	77.0
2. Tuberculous Meningitis	1.7	1.7	1.3	1.2	5.9
3. Tuberculous Peritonitis, <i>Tuberculous Mesenterica</i>	1.2	1.0	1.0	0.7	3.9
4. Other forms of Tuberculous Disease	3.5	3.9	3.0	2.6	13.2
Totals	28.0	29.4	21.4	21.2	100.0

From the above it appears that in the June Quarter the deaths of males from tuberculous phthisis and *phtisis* were 22.8 per cent. of the total deaths of males from all forms of the disease recorded in Ireland in 1904, 21.6 per cent. in the March Quarter, 18.3 per cent. in the December Quarter, and 18.1 per cent. in the September Quarter of the year; that the deaths from tuberculous meningitis of males in each of the March and June Quarters were 1.7 per cent. of the total deaths of males from all forms of tuberculous disease, and that in the September and December Quarters the percentages of these deaths were 1.3 and 1.2 respectively; that the deaths from tuberculous peritonitis and *tuberculous mesenterica* in March Quarter were 1.2 per cent. of the total deaths of males from tuberculous disease, 1.0 per cent. in each of the June and September Quarters, and 0.7 per cent. in the December Quarter of the year; and that the deaths of males in the June Quarter from other forms of tuberculous disease were 3.9 per cent. of the total deaths of males from all forms of tuberculous disease, 3.5 per cent. in the March Quarter, 3.0 in the September Quarter, and 2.8 per cent. in the December Quarter of the year.

[TABLE XV.]

TABULAR STATEMENT C.—Showing by Quarterly Periods the relative mortality represented by Deaths of Females registered in Ireland from the principal groups of Tuberculous Disease and the percentage mortality in each group to the total number of deaths from all forms of tuberculous disease registered during the Year, 1904.

GROUPS	March Quarter.	June Quarter.	September Quarter.	December Quarter.	Year 1904.
1. Tuberculous Phthisis, Phthisis	21.1	22.3	18.0	18.5	77.9
2. Tuberculous Meningitis	1.8	1.7	1.2	1.1	5.8
3. Tuberculous Peritonitis, Tuberculous Mesenterics	0.9	1.3	1.0	0.9	4.1
4. Other forms of Tuberculous Disease	2.8	3.5	3.0	2.9	12.2
Total	26.6	28.8	23.2	21.4	100.0

From Tabular Statement C. it appears that in the June Quarter of 1904, the deaths of females from tuberculous phthisis and phthisis were 22.3 per cent. of the total deaths of females from all forms of tuberculous disease recorded in Ireland in 1904, 21.1 per cent. in March Quarter, 18.0 per cent. in the September Quarter, and 18.5 in the December Quarter; that the deaths of females from tuberculous meningitis in the March Quarter, were 1.8 per cent. of the total deaths of females from tuberculous disease; 1.7 per cent. in the June Quarter, 1.2 per cent. in the September Quarter, and 1.1 per cent. in the December Quarter of the year; that the deaths from tuberculous peritonitis and tuberculous mesenterics were 1.3 per cent. in the June Quarter, 1.0 per cent. in the September Quarter, and 0.9 per cent. in each of the March and December Quarters of the year, and that the deaths from other forms of tuberculous disease were in the June Quarter 3.5 per cent., in the September Quarter 3.0 per cent., in the December Quarter 2.9 per cent., and in the March Quarter 2.8 per cent. of the total deaths from tuberculous disease registered during the year 1904.

Malignant Disease.—The deaths which are returned as having been caused by carcinomas, sarcoma, and cancer (not otherwise defined) are included under the general heading "malignant disease." The total number of deaths thus assigned in 1904 was 3,055 (of males 1,376, and of females 1,679). Of these, 826 deaths (of males 336 and of females 490) were returned as having been caused by some form of carcinomatous growth; 125 deaths (of males 62 and of females 63) were due to sarcoma; and 2,104 deaths (of males 978 and of females 1,126) were returned as having been caused by cancer (not defined).

The rate which represents the total deaths from malignant disease (0.694 per 1,000) was the highest rate as yet recorded for Ireland, the rate for the preceding year (1903) being 0.691 per 1,000. From Table IX. it will be seen that, with the exception of the death rates for the years 1895 and 1902, which show a slight decline as compared with the years immediately preceding, the death rate from malignant disease has risen steadily from 0.517 per 1,000 (51.7 per 100,000) in the year 1894 to 0.694 per 1,000 (69.4 per 100,000) in the year 1904. The actual increase of the deaths in the year 1904 over the number in 1903 was 7.

The rates which represent the total deaths for males and females, respectively, are for males, 0.631 per 1,000 and for females, 0.756 per 1,000. The Abstracts on pages 142 and 143 show the deaths from malignant disease by sexes and age periods. From examination of these figures it appears that comparatively few deaths from malignant disease occur before the age of 35 years (the number of deaths of males under 35 years being 57, and of females under 35 years being 63). If these deaths be omitted from the respective totals of the males and females who died from malignant disease, and calculations based upon the estimated number of males and females in the population, and also the estimated number of males and females taken separately, it will be found that the total deaths from malignant disease are equal to a rate of 1.9 per 1,000 persons living, aged 35 years and upwards; and that taking the sexes separately the death rate for males is 1.8 per 1,000 living aged 35 years and upwards, and for females living aged 35 years and upwards the death rate is 2.1 per 1,000 of the estimated population.

Table XV., page 22, gives the deaths from cancer by age-periods, sexes, and by the parts of the body affected.

Alcoholism.—The deaths directly attributed to delirium tremens and chronic alcoholism (including the violent deaths of 22 persons who accidentally met their fate when under the effects of alcohol) numbered 212. These do not include 7 deaths attributed to acute alcoholic poisoning, information concerning which is contained in Table XVI, page 25. Of the 212 deaths, 161 were of males and 51 were of females. It is generally believed that this figure is not an index to the effect of the abuse of alcoholic beverages on the mortality of the country, as many of the deaths which are attributed to certain diseases of local incidence are, without doubt, due to the misase, or excessive use, of alcoholic stimulants.

Rheumatism.—There were 127 deaths from rheumatic fever, acute rheumatism, (of males 60 and of females 67); there were 49 deaths attributed to *rheumatism of heart*—of males 24 and of females 25; chronic rheumatism accounted for the deaths of 189 males and 286 females; and the deaths of 26 males and 44 females were attributed to rheumatic arthritis or rheumatic gout.

Gout.—Of 20 deaths which were due to gout, 18 were those of males and 7 were those of females.

Diabetes Mellitus.—In the course of the year there were 359 deaths from diabetes registered (of males 203 and of females 156) as compared with 288 deaths in 1902, and 307 deaths in 1903. The deaths of males 45 years and upwards numbered 126, and of females 98; thus the number of deaths (224) of males and females at 45 years and upwards is over 60 per cent. of the total mortality from the disease.

DISEASES OF SPECIAL ORGANS.

Meningitis.—There were 822 deaths from inflammation of the brain or its membranes; of these 412 were of males and 410 were of females. The deaths from meningitis of children under 5 years of age numbered 356, or over 43 per cent. of the total. There were 178 deaths of boys under 5 years of age—a number equal to a rate of 0·8 per 1,000 boys living under 5 years of age; the deaths of girls under 5 years also numbered 178, equivalent to a rate of 0·8 per 1,000 girls living at that age.

Softening of the Brain.—The deaths of 188 persons, of males 89 and of females 99, were returned as being caused by softening of the brain.

General Paralysis of the Insane.—The condition known as general paralysis of the insane accounted for 88 deaths, 66 deaths, or 75 per cent. of these being of males, and 22 deaths, or 25 per cent. being of females.

Epilepsy.—The deaths referred to epilepsy were in the total 330; of these 183 were deaths of males and 147 were deaths of females. In the year 1903 the deaths from epilepsy numbered 335—of males 179 and of females 156.

Convulsions.—The deaths returned as from convulsions amounted to 1,724. Of these deaths 1,702 were of children under the age of 5 years, which number is equal to an annual death rate of 3·9 per 1,000 children living under the age of 5 years; the deaths of children under 5 years of age from convulsions are more than 10 per cent. of all deaths of children at the above age-period for the year 1904.

Locomotor Ataxy.—Of 38 persons who were reported to have died from Locomotor Ataxy, 32 were males and 6 were females; all these deaths occurred among persons who were upwards of 25 years of age.

Brain Tumour.—When the nature of the disease which causes the tumour is returned the death from brain tumour is classified accordingly. Concerning 36 deaths this information was not available. The deaths include 19 of males and 17 of females.

Diseases of the Heart.—The deaths from diseases of the heart are classified as follows:—valvular disease, endocarditis (not infective)—pericarditis—hypertrophy of heart—angina pectoris—dilatation of heart—fatty degeneration of heart—and *syncope, heart disease* (not specified).

The total deaths from the above diseases numbered 8,272, equal to an annual rate of 1·88 per 1,000 of the estimated population, and are over 10 per cent. of the total deaths registered in Ireland during the year 1904.

Diseases of the Blood Vessels.—Under the general head of diseases of blood vessels the following morbid conditions are recognised as causes of death; cerebral hæmorrhage, cerebral embolism—apoplexy, hæmiplegia—aneurysm—senile gangrene—embolism, throm-

basis (not cerebral)—phlebitis—varicose veins—and other diseases of blood vessels; in the aggregate the deaths from these diseases amounted to 3,262, and are equal to an annual rate of 0.74 per 1,000 of the population of Ireland estimated to the 30th June, 1904. The deaths from the above diseases in the aggregate form 4 per cent. of the deaths from all causes registered in Ireland in the year 1904.

Bronchitis.—The large majority of the deaths from diseases of the respiratory apparatus is due to bronchitis (as before stated in the paragraph on pneumonia the deaths from the latter disease are now classified among the General Diseases). Besides deaths from bronchitis, which amounted to 8,052, there were included among the diseases of the respiratory system 121 deaths from laryngitis; 268 from croup (not spasmodic or membranous); 311 from emphysema, asthma; 158 from pleurisy, and 60 deaths from fibroid disease of lung. The total number of deaths from diseases of the respiratory system was 9,686, which number is equal to an annual rate of 2.29 per 1,000 of the estimated population of Ireland. The aggregate deaths from diseases of the respiratory system form over 12 per cent. of the total deaths from all causes registered in the year 1904.

Gastric Ulcer.—The deaths which were returned as from gastric ulcer, in the year 1902, were 212 in number (of males 87 and of females 125); in the year 1903, 267 deaths (of males 107 and of females 160) were returned, and in the year now under notice the deaths returned from gastric ulcer rose to 309 (of males 118 and of females 191).

Appendicitis.—The deaths from appendicitis, perityphlitis, returned in the year 1902, numbered 64 (of males 36 and of females 28); in 1903 the deaths returned rose to 77 (of males 35 and of females 42); and in 1904 the deaths registered numbered 97 (of males 52 and of females 45).

Other Diseases of the Digestive System.—In the Abstracts it may be seen that there were 64 deaths from tonsillitis, quinsy; 52 deaths from diseases of the mouth, pharynx, œsophagus (not specific); 812 deaths from other non-malignant diseases of the stomach; 87 deaths from gastric catarrh; 391 deaths from enteritis (not epidemic); 293 deaths from gastro-enteritis; 128 deaths from hernia; 421 deaths from intestinal obstruction; 181 deaths from other diseases of the intestines; 301 deaths were returned as having been caused by peritonitis (not puerperal); 321 deaths were due to cirrhosis of the liver, as against 308 returned in 1903, and 317 in 1902; 380 deaths were allotted to other diseases of liver and gall bladder, and 246 to other diseases of the digestive system—not including those enumerated in this and the two foregoing paragraphs.

Diseases of Kidney and Urinary System.—The total of the deaths so classified was 1,922. Of males (1,244 in number) 187 died from acute Bright's disease, uræmia; 618 from chronic Bright's disease, albuminuria; 18 from calculus (not biliary); 248 from diseases of the bladder and prostate gland, and 178 from other diseases of the urinary system. Of the deaths of females (678 in number) 161 died from acute nephritis, uræmia; 468 from chronic Bright's disease, albuminuria; 7 from calculus (not biliary); 11 from diseases of the bladder; and 31 from other diseases of the urinary system. Further particulars as regards age and locality will be found in the Abstracts commencing on page 138 of this Report.

Tumours and other Diseases of the Uterus and Ovaries.—Ovarian tumours caused the deaths of 49 women. In these cases the nature of the growth was stated to be non-malignant or, after enquiry, information regarding its nature was not available; there were 6 deaths due to other diseases of the ovary, 45 deaths from tumour of the uterus (non-malignant); 20 deaths from other diseases of the uterus and vagina; and 4 deaths from disorders of menstruation were registered.

The numbers of deaths attributed to malignant disease of the uterus and of the ovary in the year 1904 were 206 and 21 respectively.

Pregnancy and Childbirth.—The deaths which were reported as being caused by the puerperal septic diseases, to which reference was made in a previous paragraph, when reviewing the groups of General Diseases, and which numbered 216 in the aggregate, again invite consideration. The heading of the present paragraph concerns the deaths of women registered in the year 1904, "definitely returned as either caused by, or associated with, pregnancy or childbirth." The total of such deaths is given in a special Table (XIII.) and is composed of three classes, namely, (1) those depending on puerperal septic conditions mentioned above; (2) those which have occurred from

purely obstetric causes; and (3) those deaths which (although they were of women who were either pregnant, or had been recently delivered or had died during the act of childbirth) were associated with, or complicated by some diseases to which the deaths have been assigned during the process of classification. As such deaths do not appear under deaths from the diseases or accidents of childbirth, in the Abstracts, they have been carefully noted and incorporated in Table XIII., page 18.

From the foregoing remarks it appears to be appropriate to give two rates for the deaths which have occurred of women consequent on pregnancy—one including all deaths appearing in Table XIII., corresponding to a rate of 6·57, deaths of mothers per 1,000 of births registered during the year, and a second rate in which the deaths of women in this condition, who have most probably succumbed to a complicating disorder, are excluded. The rate calculated under the latter condition would amount to 5·62 deaths of mothers per 1,000 births registered in the year 1904. The respective rates for the deaths similarly classified for the year 1903 were, respectively, 6·45 and 5·63 deaths of mothers for every 1,000 births registered during that year.

ILL-DEFINED OR NOT SPECIFIED CAUSES OF DEATH.

I desire again to draw attention to the fact that an undue proportion of the deaths which are registered is assigned to causes which cannot be considered adequate for the purposes of modern statistics. Such causes may be seen in the Abstracts. The deaths which come under this category were those stated to be due to atrophy, debility—to old age—to dropsy, ascites, anasarca—to tumour—to abscess—to hæmorrhage—to sudden death (cause not ascertained)—to causes (not specified)—and other ill-defined causes of death.

VIOLENCE.

In the year 1904, there were 1,860 deaths attributed to violence; of these 1,675 were returned as from accidental causes, 51 were homicidal, 150 were suicidal, and 4 were at the hands of the executioner. Of the 1,675 deaths from accident, 1,097 were of males and 578 were of females; of homicidal deaths 30 were of males and 21 were of females; of the deaths by suicide 117 were of males and 38 were of females; and the 4 persons who suffered the extreme penalty of the law were all males.

Amongst the accidental circumstances and the reported fatalities, were:—By drowning, 258 males and 64 females; from accident with vehicles and horses, 178 males and 32 females; from burns and scalds, 170 males and 220 females. Of the males, 107 and of the females, 102, who died from burns and scalds, were under the age of 5 years. The deaths occasioned by accidental falls were 134 of males, and 115 of females. The total deaths from violence of all forms were equal to a rate of 0·43 per 1,000 of the estimated population as against a rate of 0·41 per 1,000 for the year 1903, and an average rate of 0·44 per 1,000 for the ten years ending with 1903. Table XVI., on page 24, shows in detail the deaths which were due to the action of poisons or poisonous vapours, by certain age periods and by sexes; also whether death was the result of accident, suicide, or homicide.

Inquests.—The number of inquests held was 2,007—896 in Ulster, 604 in Leinster, 387 in Munster, and 120 in Connaught.

AGES.

Deaths of infants under 1 year old numbered 10,381, being equal to 10·0 per cent. of the number of births registered. The corresponding average percentage for the preceding ten years was 10·3.

Amongst children under 5 years of age 16,195 deaths occurred—a mortality equal to 37·0 in every 1,000 of the number living at that age. Of these 8,658 were boys and 7,537 girls; the former number representing 38·8 in every 1,000 boys, and the latter 35·2 in every 1,000 girls under 5 years old.

The deaths of persons aged 65 years and upwards are equivalent to 9·9 per cent. of the number of the living at that age.

Among the deaths registered are 711 of persons stated to have been aged 95 years or upwards—332 males and 379 females; of these 182 (86 males and 96 females) were returned as having been 100 years or upwards. In the absence of public records for remote periods, absolute verification of the ages of very old persons is not obtainable; but secondary inquiries having been made as regards persons returned during some recent years as centenarians, it was found, in almost every instance, that, so far as the Registrars could ascertain, the age was correctly stated.

TABLE XVI.—Showing the Deaths registered from Poison in 1904, distinguishing the Sex and Age of deceased, the Name of the Poison or Poisonous Gas, and whether Accidental, Suicidal, or Homicidal.

EMIGRATION.

The Returns obtained and forwarded to my office by the Royal Irish Constabulary and the Metropolitan Police, who acted as enumerators at the several Irish seaports, show that the number of emigrants (natives of Ireland) who left Ireland during the year 1904 was 36,902; of these 17,165 were males and 19,737 were females. Of the whole number, 4,517 were from the Province of Leinster; 12,696 from Munster; 10,156 from Ulster; and 9,623 from Connaught.

Of the total emigrants from Ireland in 1904, 8.9 per cent. were under 15 years of age, 83.8 per cent. were between 15 and 35 years old; and 7.3 per cent. were 35 or upwards.

PRICES OF PROVISIONS, AND PAUPERISM.

The average price of the 4 lb. loaf (1st quality, delivered) in Dublin in the year 1904 was 5½d., the average price in the year 1903, being 5½d.* Oatmeal (1st quality) averaged 1s. 6d. per cwt. in Dublin; the average price for 1903 was 14s. 10d.; the average prices of potatoes in Dublin ranged from 8s. 4d. to 4s. 1d. per cwt., against 3s. 6d. to 4s. 3d. in 1903; and those of beef from 49s. 6d. to 57s. 0d. per cwt., against 53s. 6d. to 58s. 0d. in 1903.

TABLE XVII.—AVERAGE PRICES IN DUBLIN OF BREAD, OATMEAL, POTATOES, and BEEF, during the years 1894-1904, and the AVERAGE NUMBER OF PERSONS IN IRELAND RECEIVING IS-DOOR and OUT-DOOR RELIEF on Saturdays in those years; also the AVERAGE PRICES OF PROVISIONS, and the AVERAGE NUMBER OF PERSONS IN RECEIPT OF RELIEF during each quarter of the year 1904.

Year.	AVERAGE PRICES OF PROVISIONS.						PAUPERISM.

* Provided from returns received from Messrs. "Belmont, Limited," and Messrs. "Johnston, Macneil, and O'Brien, Limited."

† Compiled from returns furnished by the Local Government Board.

Surveying the period covered by the foregoing Table, *i.e.*, 1904, and the ten years preceding, it is found that beef was lowest in the year 1896, when the average prices ranged from 43s. 6d. to 54s. per cwt., and in 1898, when they ranged from 44s. 6d. to 58s.; bread was cheapest in 1894 and 1895, respectively, when the average price (1st quality, delivered) was 4½d. per 4 lb. loaf. Oatmeal and potatoes were cheapest in 1896, in which year the average price of oatmeal (1st quality) was 12s. 7d. per cwt.; and the average prices of potatoes ranged from 1s. 11d. to 2s. 11d. per cwt. The highest average price of bread was 5½d. per 4 lb. loaf in 1897 and 1904, respectively, and of oatmeal 15s. 3d. per cwt. in 1898; the highest range for potatoes was from 3s. 4d. to 4s. 7d. per cwt. in 1900, and for beef, from 53s. 6d. to 58s. 0d. per cwt. in 1902.

My acknowledgments are due to the Local Government Board, for Returns which indicate that the average number of workhouse inmates in Ireland on Saturdays during the year 1904 was 48,593, being 70 over the average for the preceding year; and that the average number of persons receiving out-door relief was 56,424, or 543 under the corresponding number for 1903.

THE WEATHER.

The following particulars and those given on pages 178-191, which are inserted by the kind permission of the Editor of the "Dublin Journal of Medical Science," have been derived from Returns of Meteorological Observations taken in Dublin City by Sir John W. Moore, B.A., M.D., DUB.; D.S.C., OXON; F.R.C.P.S.; F.R. MET. SOC.; and published in the *Journal* during the years 1904-1905. The Tables on pages 192-3, and 196, also are founded on Sir John Moore's observations.

The mean Atmospheric Pressure has been obtained from daily readings of the barometer at 9 A.M. and 9 P.M., corrected and reduced to 32° Fahrenheit at the mean sea level. The Mean Temperature values have been deduced from the maximal and minimal readings of the thermometer in the shade. The Rainfall is that measured daily at 9 A.M. A rainy day is one on which at least .01 inch of rain falls within the twenty-four hours from 9 A.M. to 9 A.M.

The Mean Height of the Barometer during the year 1904 was 29.917 inches. The highest observed reading was 30.757 inches at 9 A.M. on January 22nd. The lowest observed reading was 28.620 inches, about 4 A.M. on February 13th. The extreme range of atmospheric pressure was 2.137 inches compared with 2.076 inches in 1903.

The Mean Temperature of the air for the year was 50.2°. The highest reading was 77.7° on August 3rd, and the lowest reading was 27.3° on November 22nd. The average mean temperature for the years 1884-1903 was 49.5°. The mean temperature deduced from the daily readings of the dry bulb thermometer at 9 A.M. and 9 P.M. was 50.4°.

Snow fell on 189 days, including snow or sleet on 23 days and hail on 24 days. The average annual number of rainy days in the years 1884-1903 was 185.6. The total rainfall measured 22.190 inches, compared with an average of 27.352 inches in the twenty years 1884-1903. During the first half of 1904 (January to June, inclusive) the rainfall was 12.817 inches on 102 days; during the second half (July to December, inclusive) 9.363 inches fell on 87 days.

As regards the Direction of the Wind, 738 observations were made during the year, with this result—N., 27; N.E., 63; E., 64; S.E., 68; S., 74; S.W., 121; W., 201; N.W., 81; Calms, 33.

In closing this Report, I desire to express my obligations to Dr. Ninian M. Falkiner, Medical Superintendent of Statistics in this Department, for the valuable assistance he has given me in its preparation, more especially with reference to the Statistics of Disease and Causes of Death.

I have the honour to be,

Your Excellency's faithful Servant,

ROBERT E. MATHESON,

Registrar-General

GENERAL REGISTER OFFICE,

CRANEMORE HOUSE,

Dublin, 4th August, 1905.

MARRIAGES, BIRTHS, and DEATHS registered in the Year 1904.

I.—PROVINCE OF LEINSTER.—MARRIAGES, BIRTHS AND DEATHS, 1904.

SUPERINTENDENT REGISTERS' DISTRICTS, ARRANGED BY COUNTIES.*

* wherever the minus sign (-) is prefixed to the number given in the column headed "Excess of Births over Deaths," it denotes that the births, instead of exceeding the deaths, were, in fact, less than the deaths to the extent stated.

Notes.—The Registrars' Districts are subdivisions of the Counties or Superintendent Registrars' Districts, and are identical with the Depressment Districts of the same name, except in a few instances. See page 71, pp. 201.

The letter W denotes that the Registrar's District contains within its limits the Workhouse belonging to the Union or Superintendent Registrar's District.

Whenever the minus sign (-) is prefixed to the numbers given in the column headed "Excess of Births over Deaths," it denotes that the births instead of exceeding the deaths, were, in fact, less than the deaths in the district stated.

BIRTHS AND DEATHS Registered in the Year 1904.—REGISTRARS' DISTRICTS arranged by COUNTIES AND SUPERINTENDENT REGISTRARS' DISTRICTS—continued.

NOTE.—This Table has been constructed for the years 1830 and 1871—By adopting the rates of increase of the male and female population between 1831 and 1851, as shown by the Irish Census Reports of 1851—the final estimate of the population of Ireland during these years is 1851.

1851 to 1861.—By adopting the rates of increase between the population of 1851 and 1861 according to the Irish Census Report of 1861 according to the returns received from the Registrar-General in England.

1861 to 1871.—The English birth-rate, as shown, was used, deducting the number of deaths and the number of emigrants at each year, as given in the Irish Census Reports of 1861, on the basis, proportioned to the number of recorded deaths and the number of emigrants being made in each year for the excess of the number then arrived at by 1861 over the actual population according to the Census of that year.

1871 to 1881.—The English birth and death rates, as shown, were used, deducting the number of emigrants according to the returns obtained by the Registrar-General for Ireland, and allowing for excess over means numbers for 1881 and 1871 as explained for the last period.

1881 to 1904.—By adding the births registered in each year to the estimated population for the previous year, deducting the deaths and the number of emigrants, and adding the deaths for the years 1881, 1882, 1883, 1884, 1885, 1886, 1887, 1888, 1889, 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, 1900, 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909, 1910, 1911, 1912, 1913, 1914, 1915, 1916, 1917, 1918, 1919, 1920, 1921, 1922, 1923, 1924, 1925, 1926, 1927, 1928, 1929, 1930, 1931, 1932, 1933, 1934, 1935, 1936, 1937, 1938, 1939, 1940, 1941, 1942, 1943, 1944, 1945, 1946, 1947, 1948, 1949, 1950, 1951, 1952, 1953, 1954, 1955, 1956, 1957, 1958, 1959, 1960, 1961, 1962, 1963, 1964, 1965, 1966, 1967, 1968, 1969, 1970, 1971, 1972, 1973, 1974, 1975, 1976, 1977, 1978, 1979, 1980, 1981, 1982, 1983, 1984, 1985, 1986, 1987, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1997, 1998, 1999, 2000, 2001, 2002, 2003, 2004, 2005, 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2244, 2245, 2246, 2247, 2248, 2249, 2250, 2251, 2252, 2253, 2254, 2255, 2256, 2257, 2258, 2259, 2260, 2261, 2262, 2263, 2264, 2265, 2266, 2267, 2268, 2269, 2270, 2271, 2272, 2273, 2274, 2275, 2276, 2277, 2278, 2279, 2280, 2281, 2282, 2283, 2284, 2285, 2286, 2287, 2288, 2289, 2290, 2291, 2292, 2293, 2294, 2295, 2296, 2297, 2298, 2299, 2300, 2301, 2302, 2303, 2304, 2305, 2306, 2307, 2308, 2309, 2310, 2311, 2312, 2313, 2314, 2315, 2316, 2317, 2318, 2319, 2320, 2321, 2322, 2323, 2324, 2325, 2326, 2327, 2328, 2329, 2330, 2331, 2332, 2333, 2334, 2335, 2336, 2337, 2338, 2339, 2340, 2341, 2342, 2343, 2344, 2345, 2346, 2347, 2348, 2349, 2350, 2351, 2352, 2353, 2354, 2355, 2356, 2357, 2358, 2359, 2360, 2361, 2362, 2363, 2364, 2365, 2366, 2367, 2368, 2369, 2370, 2371, 2372, 2373, 2374, 2375, 2376, 2377, 2378, 2379, 2380, 2381, 2382, 2383, 2384, 2385, 2386, 2387, 2388, 2389, 2390, 2391, 2392, 2393, 2394, 2395, 2396, 2397, 2398, 2399, 2400, 2401, 2402, 2403, 2404, 2405, 2406, 2407, 2408, 2409, 2410, 2411, 2412, 2413, 2414, 2415, 2416, 2417, 2418, 2419, 2420, 2421, 2422, 2423, 2424, 2425, 2426, 2427, 2428, 2429, 2430, 2431, 2432, 2433, 2434, 2435, 2436, 2437, 2438, 2439, 2440, 2441, 2442, 2443, 2444, 2445, 2446, 2447, 2448, 2449, 2450, 2451, 2452, 2453, 2454, 2455, 2456, 2457, 2458, 2459, 2460, 2461, 2462, 2463, 2464, 2465, 2466, 2467, 2468, 2469, 2470, 2471, 2472, 2473, 2474, 2475, 2476, 2477, 2478, 2479, 2480, 2481, 2482, 2483, 2484, 2485, 2486, 2487, 2488, 2489, 2490, 2491, 2492, 2493, 2494, 2495, 2496, 2497, 2498, 2499, 2500, 2501, 2502, 2503, 2504, 2505, 2506, 2507, 2508, 2509, 2510, 2511, 2512, 2513, 2514, 2515, 2516, 2517, 2518, 2519, 2520, 2521, 2522, 2523, 2524, 2525, 2526, 2527, 2528, 2529, 2530, 2531, 2532, 2533, 2534, 2535, 2536, 2537, 2538, 2539, 2540, 2541, 2542, 2543, 2544, 2545, 2546, 2547, 2548, 2549, 2550, 2551, 2552, 2553, 2554, 2555, 2556, 2557, 2558, 2559, 2560, 2561, 2562, 2563, 2564, 2565, 2566, 2567, 2568, 2569, 2570, 2571, 2572, 2573, 2574, 2575, 2576, 2577, 2578, 2579, 2580, 2581, 2582, 2583, 2584, 2585, 2586, 2587, 2588, 2589, 2590, 2591, 2592, 2593, 2594, 2595, 2596, 2597, 2598, 2599, 2600, 2601, 2602, 2603, 2604, 2605, 2606, 2607, 2608, 2609, 2610, 2611, 2612, 2613, 2614, 2615, 2616, 2617, 2618, 2619, 2620, 2621, 2622, 2623, 2624, 2625, 2626, 2627, 2628, 2629, 2630, 2631, 2632, 2633, 2634, 2635, 2636, 2637, 2638, 2639, 2640, 2641, 2642, 2643, 2644, 2645, 2646, 2647, 2648, 2649, 2650, 2651, 2652, 2653, 2654, 2655, 2656, 2657, 2658, 2659, 2660, 2661, 2662, 2663, 2664, 2665, 2666, 2667, 2668, 2669, 2670, 2671, 2672, 2673, 2674, 2675, 2676, 2677, 2678, 2679, 2680, 2681, 2682, 2683, 2684, 2685, 2686, 2687, 2688, 2689, 2690, 2691, 2692, 2693, 2694, 2695, 2696, 2697, 2698, 2699, 2700, 2701, 2702, 2703, 2704, 2705, 2706, 2707, 2708, 2709, 2710, 2711, 2712, 2713, 2714, 2715, 2716, 2717, 2718, 2719, 2720, 2721, 2722, 2723, 2724, 2725, 2726, 2727, 2728, 2729, 2730, 2731, 2732, 2733, 2734, 2735, 2736, 2737, 2738, 2739, 2740, 2741, 2742, 2743, 2744, 2745, 2746, 2747, 2748, 2749, 2750, 2751, 2752, 2753, 2754, 2755, 2756, 2757, 2758, 2759, 2760, 2761, 2762, 2763, 2764, 2765, 2766, 2767, 2768, 2769, 2770, 2771, 2772, 2773, 2774, 2775, 2776, 2777, 2778, 2779, 2780, 2781, 2782, 2783, 2784, 2785, 2786, 2787, 2788, 2789, 2790, 2791, 2792, 2793, 2794, 2795, 2796, 2797, 2798, 2799, 2800, 2801, 2802, 2803, 2804, 2805, 2806, 2807, 2808, 2809, 2810, 2811, 2812, 2813, 2814, 2815, 2816, 2817, 2818, 2819, 2820, 2821, 2822, 2823, 2824, 2825, 2826, 2827, 2828, 2829, 2830, 2831, 2832, 2833, 2834, 2835, 2836, 2837, 2838, 2839, 2840, 2841, 2842, 2843, 2844, 2845, 2846, 2847, 2848, 2849, 2850, 2851, 2852, 2853, 2854, 2855, 2856, 2857, 2858, 2859, 2860, 2861, 2862, 2863, 2864, 2865, 2866, 2867, 2868, 2869, 2870, 2871, 2872, 2873, 2874, 2875, 2876, 2877, 2878, 2879, 2880, 2881, 2882, 2883, 2884, 2885, 2886, 2887, 2888, 2889, 2890, 2891, 2892, 2893, 2894, 2895, 2896, 2897, 2898, 2899, 2900, 2901, 2902, 2903, 2904, 2905, 2906, 2907, 2908, 2909, 2910, 2911, 2912, 2913, 2914, 2915, 2916, 2917, 2918, 2919, 2920, 2921, 2922, 2923, 2924, 2925, 2926, 2927, 2928, 2929, 2930, 2931, 2932, 2933, 2934, 2935, 2936, 2937, 2938, 2939, 2940, 2941, 2942, 2943, 2944, 2945, 2946, 2947, 2948, 2949, 2950, 2951, 2952, 2953, 2954, 2955, 2956, 2957, 2958, 2959, 2960, 2961, 2962, 2963, 2964, 2965, 2966, 2967, 2968, 2969, 2970, 2971, 2972, 2973, 2974, 2975, 2976, 2977, 2978, 2979, 2980, 2981, 2982, 2983, 2984, 2985, 2986, 2987, 2988, 2989, 2990, 2991, 2992, 2993, 2994, 2995, 2996, 2997, 2998, 2999, 3000, 3001, 3002, 3003, 3004, 3005, 3006, 3007, 3008, 3009, 3010, 3011, 3012, 3013, 3014, 3015, 3016, 3017, 3018, 3019, 3020, 3021, 3022, 3023, 3024, 3025, 3026, 3027, 3028, 3029, 3030, 3031, 3032, 3033, 3034, 3035, 3036, 3037, 3038, 3039, 3040, 3041, 3042, 3043, 3044, 3045, 3046, 3047, 3048, 3049, 3050, 3051, 3052, 3053, 3054, 3055, 3056, 3057, 3058, 3059, 3060, 3061, 3062, 3063, 3064, 3065, 3066, 3067, 3068, 3069, 3070, 3071, 3072, 3073, 3074, 3075, 3076, 3077, 3078, 3079, 3080, 3081, 3082, 3083, 3084, 3085, 3086, 3087, 3088, 3089, 3090, 3091, 3092, 3093, 3094, 3095, 3096, 3097, 3098, 3099, 3100, 3101, 3102, 3103, 3104, 3105, 3106, 3107, 3108, 3109, 3110, 3111, 3112, 3113, 3114, 3115, 3116, 3117, 3118, 3119, 3120, 3121, 3122, 3123, 3124, 3125,

METEOROLOGICAL OBSERVATIONS

FOR EACH MONTH OF THE YEAR 1904.

By SIR JOHN W. MOORE, B.A., M.D., DUBL.; D. SC., OXON., F.R.C.P.L., F.R., MONT. SOC.

(Extracted from the *Dublin Journal of Medical Science*.)

JANUARY.—An open, damp and rainy month, with an overwhelming prevalence of S W and W. winds, except at the very beginning, when Ireland was still within the "sphere of influence" of the great continental anticyclone, which caused severe frost in Central Europe up to the 8th inclusive, and again from the 17th to the 28th inclusive. These cold "snaps" were separated by a sudden and extreme rise of temperature on the 13th and 14th, when the thermometer rose to 50° or upwards over France, Belgium, and many parts of Germany. This wave of warmth was brought by the S.W. winds of a vast atmospheric depression, which was central near the Shetlands at 8 a.m. of the 14th, the barometer at that hour reading 28.83 inches at Sunning Head. In Dublin the lowest pressure recorded was 28.757 inches about 1.30 a.m. of the day named. As this great disturbance moved away to the eastward, it gradually filled up and was followed by a large anticyclone, in which the barometer rose to 30.753 inches, or exactly two inches higher, in Dublin on the morning of the 22nd. The month was very open in Ireland, Scotland, and Scandinavia. Some sharp frosts were experienced in England—particularly in the Thames Valley and over the south-eastern counties.

The duration of bright sunshine was estimated at 4975 hours, the daily average being 17 hours. The corresponding values for January, 1901, were 64 hours and 21 hours; for January, 1902, 54 hours and 17 hours; and for January, 1903, 565 hours and 18 hours.

In Dublin the arithmetical mean temperature (42.6°) was above the average (41.6°) by one degree; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 41.9°. In the thirty-nine years ending with 1903, January was coldest in 1881 (M. T. = 38.2°), and warmest in 1898 (M. T. = 47.8°). In 1902 the M. T. was 43.0°; in 1903 it was 42.1°.

The mean height of the barometer was 29.813 inches, or 0.061 inch below the corrected average value for January—namely, 29.874 inches. The mercury rose to 30.753 inches at 9 a.m. of the 22nd, having fallen to 28.757 inches at 1.30 a.m. of the 14th. The observed range of atmospheric pressure was, therefore, exactly 2 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41.9°, or 0.5° above the value for January, 1903. Using the formula, *Mean Temp.* = *Min.* + (*Max.*—*Min.*) × .52, the M.T. becomes 42.7°, compared with a thirty years' (1871-1900) average of 41.7°. The arithmetical mean of the maximal and minimal readings was 42.6°, compared with a thirty years' average of 41.6°. On the 27th the thermometer in the screen rose to 54.3°—wind, S.S.W.; on the 16th the temperature fell to 31.5°—wind, W. by N. The minimum on the grass was 27.6°, on the 31st—wind, W.

The rainfall was 2335 inches, distributed over 19 days. Of this amount 1328 inches fell on three consecutive days—the 2nd, 3rd and 4th. The average rainfall for January in the thirty-five years, 1866-1900, inclusive, was 2230 inches, and the average number for January in the thirty-five years, 1866-1900, inclusive, was 2130 inches, and the average number of rainy days was 18. The rainfall, therefore, and rainy days were somewhat above the average. The record rainfall for January was in 1895—namely, 5711 inches on 24 days. In 1876, only 406 inch was measured on but 9 days. In 1902, 1614 inches fell on 12 days; in 1903, 3269 inches on 29 days.

The atmosphere was foggy on the 5th, 11th, 12th, 19th, 21st, 22nd, 23rd, and 30th. High winds were noted on 13 days, reaching the force of a gale on 6 days—the 10th, 13th, 14th, 27th, 28th, and 29th. Snow or sleet fell on the 3rd, 15th, and 16th; hail on the 3rd, 10th, 13th, 14th, and 15th. Temperature exceeded 50° in the screen on 8 days; while it fell to 32° in the screen on only 3 nights, compared with 7 nights in 1903 and 1902, 9 nights in 1901, 2 in 1900, 4 in 1899, only 1 night in 1898, 13 nights in 1897, only 3 in 1896, 18 in 1895, and 15 in 1892. The minima on the grass were 32° or less on 11 nights, compared with 9 nights in 1903, 12 nights in 1902, 11 nights in 1901, 13 nights in 1900, 18 in 1899, only 3 in 1898, 21 in 1897, 8 in 1896, 29 in 1895, and 25 in 1892.

In Dublin the rainfall up to January 31st, 1904, amounted to 2535 inches on 19 days, compared with 3269 inches on 29 days in 1903, 1614 inches on 12 days in 1902, 3672 inches on 17 days in 1901, 2579 inches on 27 days in 1900, 2483 inches on 24 days in 1899, 1786 inches on 14 days in 1898, 2634 inches on 17 days in 1897, only 720 inch on 14 days in 1896, and with a thirty-five years' average (1866-1900) of 2139 inches on 18 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29.808 inches, the highest reading observed being 30.753 inches at 9 a.m. of the 22nd, the lowest, 28.264 inches at 9 a.m. of the 13th. The mean temperature was 43.0°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 42.5°. Rain fell on 16 days to the amount of 2453 inches, 569 inch being measured on the 3rd.

At Glencree, Kildney, Co. Dublin, the rainfall was 243 inches on 17 days, '47 inch being measured on the 2nd. The average fall in January for the 19 years, 1885-1903, was 2342 inches on 17.3 days. In 1885 the rainfall was 593 inches on 24 days; in 1886, 70 inch on 9 days; in 1897, 808 inches on 20 days; in 1898, 158 inches on 13 days; in 1899, 2345 inches on 22 days; in 1900, 2352 inches on 25 days; in 1901, 983 inches on 15 days; in 1902, 162 inches on 12 days; and in 1903, 282 inches on 21 days. Snow fell on the 16th.

At Knockdolan, Greystones, Co. Wicklow, the rainfall was 2735 inches on 17 days, compared with 3300 inches on 15 days in 1903; 1860 inches on 9 days in 1902; 4035 inches on 16 days in 1901; 3766 inches on 24 days in 1900; 4395 inches on 24 days in 1899, 2345 inches on 13 days in 1898; 3660 inches on 30 days in 1897; and only '485 inch on 7 days in 1896. The heaviest fall in 24 hours was 870 inch, on the 2nd.

Dr. B. H. Stoebe, writes that at the National Hospital for Consumption, Newcastle, Co. Wicklow, rain fell to the amount of 3810 inches on 18 days, the maximal falls in 24 hours being 622 inch on the 4th, and 519 inch on the 28th. The shade thermometers rose to 53° on the 18th, and fell to 32° on the 16th and 31st. In January, 1899, the rainfall at this Second Order Station, was 4700 inches on 28 days; in 1900, 3810 inches on 28 days; in 1901, 3541 inches on 14 days; in 1902, 1666 inches on 12 days; and in 1903, 4339 inches on 19 days.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, the rainfall was 350 inches on 25 days, 63 inch being measured on the 2nd. The corresponding figures for 1903 were 238 inches on 14 days, and for 1903, 388 inches on 19 days. The mean shade temperature was 47°4", compared with 40° in 1902, and 41° in 1903, the extreme readings being—highest, 53°, on the 26th, lowest, 31°, on the 16th, on which day snow fell.

In Cork the rainfall was 530 inches on 26 days, an amount which was 130 inches above the average. In 1903, 807 inches of rain fell on 26 days.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 21 days to the amount of 2561 inches, 505 inch being measured on the 4th. The total amount of sunshine was 526 hours, the largest daily duration being 85 hours on the 31st.

At the Railway Hotel, Roscom, Connemara, Co. Galway, the rainfall was 5814 inches on 26 days, the maximal fall in 24 hours being 830 inch on the 6th. The observer, Mr. A. A. Smith, remarks that severe weather prevailed—thunder, lightning, hail and sleet being of frequent occurrence during the month. He reports thunderstorms on the 7th, 27th and 29th, and thunder and lightning on the 13th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, Co. Dublin, reports that the mean temperature of that Health Resort was 43°6", being 0°6" below the average for the month of January during the previous 6 years. The extremes were—highest, 53° on the 26th; lowest, 33° on the 16th and 31st. At Bournemouth the mean was 40°7", the extremes being—highest, 52° on the 13th and 14th; lowest, 37° on the 28th, and the thermometer there fell below 32° on 5 other days during the month. The mean daily range of temperature was 7° at Kingstown, but at Bournemouth it was 9°8". The mean temperature of the sea at Sandycove bathing-place was 42°7", being 5°8" below the average for January during the previous 6 years. The mean relative humidity of the atmosphere was 84 per cent., being the highest recorded for the month at Kingstown since January, 1900; at Bournemouth it was 90 per cent. The total duration of bright sunshine was 452 hours, being 7.8 hours below the average for January during the previous 3 years. It was 526 hours at the Ordnance Survey Office, Phoenix Park; 384 hours at Valentia, 381 hours at Parsinstown, 352 hours at Southport, and 352 hours at Eastbourne.

FRONTCAST.—A cold, gloomy, damp and rainy month, with a very low mean atmospheric pressure—29.490 inches—that of the week ended Saturday, the 13th, being only 29.035 inches. The rainfall of the first five days totted up to 1'467 inches. Only from the 15th to the 22nd, inclusive, was the temperature high for the time of year. The rise of temperature on the 19th was sudden and rapid, amounting to 19° in a few hours—from 31.8° to 50.8° in Dublin. The mean temperature of the 20th was 51.5°; of the 21st, it was 51.3°. The 29th was one of the coldest days felt during this winter—the screened thermometer ranged only between 34.1° and 38.0°, the mean being 36.1°. February, 1903, had been singularly warm in Dublin, for the mean temperature was 47°5"—a record for February—or 50° above the average. The mean temperature of February, 1904, comes out as 40°7", or 6°8" lower.

The duration of bright sunshine was estimated at only 430 hours, or a daily average of 15 hours, compared with 7925 hours, or a daily average of 29 hours in February, 1902, and 635 hours or a daily average of 23 hours in February, 1903.

In Dublin the mean temperature (40°7") was 1°8" below the average (42.5°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 39°9". In the thirty-nine years ending with 1903, February was coldest in 1895 (M. T. = 34.2°), and warmest in 1869 (M. T. = 46.7°) and in 1903 (M. T. = 47.3°). In 1890 the M. T. was 37.9°, in 1901 it was 37.9°, and in 1902, 39.2°.

The mean height of the barometer was 29.490 inches, or 0.365 inch below the average value for February—namely, 29.855 inches. The mercury rose to 30.261 inches at 9 a.m. of the 27th, having fallen to 28.620 inches about 4 a.m. of the 13th. The observed range of atmospheric pressure was, therefore, 1'641 inches. It is a curious fact that in February, 1903, the highest reading of the barometer was recorded on the 13th, the lowest on the 27th.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 39°9", or 20° below the value for January, 1904. Using the formula, $Mean Temp. = \frac{M_{9a.m.} + (Max - Min) \times .50}{2}$, the M. T. is 40°70", compared with a thirty years' (1871-1900) average of 42°7". On the 21st the thermometer in the screen rose to 56°7"—wind, S.W.; on the 17th the temperature fell to 30°—wind, W.N.W. The minimum on the gram was 26.1° on the 1st (wind, W.).

The rainfall was 3512 inches, distributed over 17 days. The average rainfall for February in the thirty-five years, 1866-1900, inclusive, was 1990 inches, and the average number of rainy days was 16. The rainfall, therefore, was much above, while the rainy days were also above, the average. In 1883 the rainfall in February was large—3732 inches on 17 days; in 1879 3706 inches fell on 23 days. On the other hand, in 1891, only 0·2 inch was measured on but 2 days.

The atmosphere was foggy on the 1st, 9th, 10th, 11th, 16th, 25th, and 29th. The amount of cloud—71·6 per cent—was considerably above the average—66 per cent. At 9 a.m. the mean was 80 per cent. High winds were noted on 11 days, and reached the force of a gale on 4 days, namely—the 7th, 12th, 13th, and 21st. Hail fell on the 4th and 13th. Snow or sleet fell on the 5th, 8th, 10th, 17th, and 29th. A solar halo was seen on the 6th. There was a thunderstorm on the evening of the 12th. A faint aurora was seen at 9 p.m. of the 14th.

The temperature reached or exceeded 50° in the screen on 5 days, and it fell to or below 32° on 5 nights, compared with as many as 18 nights in 1896, and only one night in 1903. The minima on the gram were 32° or less on 16 nights, compared with every night in 1896, and only three nights in 1903. The thermometer twice failed to rise to 40° in the screen (on the 13th and 29th). The highest minimum was 48·1° on the 20th.

In Dublin the rainfall up to February 28th, 1903, amounted to 5847 inches on 36 days, compared with 5735 inches on 50 days in 1900, 3872 inches on 39 days in 1901, 5362 inches on 22 days in 1902, 5693 inches on 35 days in 1903, only 714 inch on 16 days in 1891, and a thirty-five years (1866-1900) average of 4220 inches on 34 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·455 inches, the highest reading observed being 30·956 inches at 9 a.m. of the 27th, the lowest, 28·695 inches at 9 a.m. of the 14th. The mean temperature was 41·0°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 40·8°. Rain fell on 18 days to the amount of 3·219 inches, 439 inch being measured on the 3rd. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 37·95, giving a daily average of 1·28 hours. The corresponding figures for January, 1904, were 45·25 hours and 1·46 hours.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 21 days to the amount of 405 inches, the greatest daily fall being 38 inch on the 4th. Sleet and hail fell on the 11th, 18th and 17th, snow on the 15th and 16th. There was a severe thunderstorm on the 12th. In February, 1901, the rainfall was 1·55 inches on 10 days; in 1902, it was 2·76 inches on 11 days, in 1903, it was 2·95 inches on 15 days. The temperature in the shade ranged from 30° on the 1st and 17th to 53° on the 20th and 21st. The mean temperature in the screen was 40·4°, compared with 39·0° in 1902, and 47·1° in 1903.

At Knockdellian, Greystones, Co. Wicklow, 2957 inches of rain fell on 19 days. The heaviest fall in 24 hours was 600 inch on the 12th. In February, 1900, the rainfall was 6·670 inches on 20 days, in 1901, 1,325 inches on 11 days; in 1902, 2,590 inches on 8 days; in 1903, 2,870 inches on 14 days. The total fall to February 29th, 1904, inclusive, was 5·692 inches on 36 days, compared with 6·170 inches on 29 days in 1903, 4,450 inches on 17 days in 1902, 5,430 inches on 27 days in 1901, 10,435 inches on 44 days in 1900, 8,610 inches on 42 days in 1899, 3,380 inches on 25 days in 1898, 5,190 inches on 37 days in 1897, and only 1·940 inches on but 17 days in 1896.

The rainfall at Clonsilla, Kilmey, Co. Dublin, amounted to 3·56 inches on 30 days, compared with 2·35 inches on 12 days in 1902, and 2·05 inches on 14 days in 1903. The average rainfall for February during 19 years, 1885-1903, at this station is 1·800 inches on 13·7 days. The greatest rainfall in 24 hours was 75 inch on the 12th. Since January 1st the rainfall was 5·98 inches on 37 days, compared with 4·90 inches on 35 days in 1903, 3·97 inches on 24 days in 1902, 4·39 inches on 23 days in 1901, 7·23 inches on 48 days in 1900, 6·28 inches on 36 days in 1899, 3·32 inches on 29 days in 1898, 4·31 inches on 38 days in 1897, and 1·64 inches on 19 days in 1896. The rainfall in February, 1904, has been exceeded at Clonsilla in February (which is usually the month of the lowest fall) only in 1900, when 4·41 inches fell on 23 days, and 1895, when 5·68 inches fell on 18 days.

Dr. B. H. Steele reports that the rainfall at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, was 4,408 inches on 24 days, compared with 5·929 inches on 20 days in 1903, 1,290 inches on 11 days in 1901, 2,923 inches on 10 days in 1902, and 8,096 inches on 16 days in 1903. The maximal fall in 24 hours was 701 inch on the 26th, but 600 inch also fell on the 7th, and 590 inch on the 23rd. Up to February 29th, the rainfall at Newcastle amounted to 7·718 inches on 42 days, compared with 4·837 inches on 35 days in the corresponding period of 1901, 4·629 inches on 22 days in 1902, and 7·416 inches on 30 days in 1903. At this Second Order Station the screened thermometers fell to 31·0° on the 17th, and rose to 54·0° on the 21st.

From the Railway Hotel, Recan, Connemara, Co. Galway, Mr. A. A. Smith reports that the rainfall was 7·710 inches on 28 days, compared with 5·890 inches on 22 days in 1903, 3·195 inches on 12 days in 1902, only 1·748 inches on 11 days in 1901, and 3·785 inches on 17 days in 1900. The maximal fall in 24 hours was 1,039 inches on the 22nd. The month was generally severe, with high winds, which blew with hurricane force on the 12th and 13th. Snow fell on three days, heavily on the 14th.

At Cuck rails fell on 25 days to the amount of 5·73 inches, or 2·34 inches over the average for February. The heaviest fall in 24 hours was 61 inch on the 28th. The rainfall of the first two months of 1904 has been 11·30 inches, or 3·64 inches above average.

At the Ordnance Survey Office, Phoenix Park, the rainfall was 3·296 inches on 20 days, the maximal measurement in 24 hours being 370 inch on the 5th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that Health Resort was 41·1°, being 1·0° below the average for February during the previous 5 years. The extremes were—highest, 56°, on the 20th and 21st;

lowest, 30°, on the 17th. At Bournemouth the mean was 41·2°, the extremes being—highest, 54° on the 16th; lowest, 26° on the 1st. The mean daily range of temperature was 7·3°, and at Bournemouth it was 9·1°. The mean relative humidity of the atmosphere was 85 per cent., being 8 per cent. greater than the average for the month during the previous 3 years. The mean temperature of the sea at Sandycove bathing-place was 41·1°, being the average for the month during the previous 6 years. The total rainfall was 3·01 inches on 19 days, and at Bournemouth it was 3·08 inches on 23 days. The total duration of bright sunshine was 471 hours, compared with 472 hours at the Ordnance Survey Office, Phoenix Park; 475 hours at Valentia, 384 hours at Parnestown, 407 hours at Southport, and 537 hours at Eastbourne.

MARCH.—March, 1904, was cold and unsettled, with frequent, though not heavy, rainfall—on the 7th, however, the measurement was 518 inch, or more than one-fourth of the total precipitation in the month. A warm spell, with fresh S.W. winds occurred on the 19th and 20th, the maximum on the former day being 60·8°—the highest reading in Dublin since October 13, 1903, and the minimum on the latter day being 50·0°. On the 16th, also, the thermometer ran up to 53·5° under the influence of a southerly wind and bright sunshine. Anticyclones prevailed at the beginning of the month, from the 9th to the 13th, and from the 23rd to the 27th. On the 3rd the barometer rose by 6 p.m. to 30·17 inches at Archangel.

The duration of bright sunshine was estimated at 101 hours, compared with 110·75 hours in 1903, 94 hours in 1902, 132·5 hours in 1901, and only 84 hours in 1900. The daily average of bright sunshine was 3·26 hours, compared with 3·57 hours in 1903, 3 hours in 1902, 4·27 hours in 1901, and only 2·7 hours in 1900.

In Dublin the arithmetical mean temperature (42·9°) was 0·7° below the average (43·6°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 41·3°. In the forty years ending with 1904, March was coldest in 1867 and 1888 (M. T. = 39·0°), and warmest in 1895 (M. T. = 43·1°). In 1903 the M. T. was 43·6°.

The mean height of the barometer was 29·958 inches, or 0·042 inch above the corrected average value for March—namely, 29·916 inches. The mercury rose to 30·446 inches at 9 p.m. of the 23rd and fell to 29·264 inches at 9 p.m. of the 29th. The observed range of atmospheric pressure was, therefore, 1·182 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 41·3°. Using the formula, $Mean Temp. = Max. + (Max. - Min.) \times \frac{1}{365}$, the M. T. becomes 42·7°. The arithmetical mean of the maximal and minimal readings was 42·3°, compared with a thirty years' (1871-1900) average of 43·6°. On the 19th the thermometer in the screen rose to 60·8°—wind, S.W.; on the 11th the temperature fell to 28·9°—wind, W. The minimum on the grass was 25·1°, also on the 11th.

The rainfall was 2·991 inches, distributed over 19 days. The average rainfall for March in the thirty-five years, 1869-1905, inclusive, was 1·960 inches, and the average number of rainy days was 160. The rainfall, therefore, and the rainy days were above the average. In 1867 the rainfall in March was very large—4·972 inches on 22 days. On the other hand, the smallest March rainfall was 2·88 inch on 8 days in 1893. In 1900, only ·963 inch fell on 13 days. In 1903 the rainfall was 3·623 inches on 26 days.

The atmosphere was foggy in the city on the 3rd, 10th, 11th, 12th, 14th, 17th and 18th. High winds were noted on 12 days, reaching the force of a gale on 3 occasions—namely, the 5th, 8th, and 30th. Snow or sleet occurred on the 1st, 4th, 5th, 6th, 14th, 29th, and 30th; hail also fell on the 1st, 2nd, 4th, 5th, 6th, 29th, and 30th. Temperature reached or exceeded 50° in the screen on 10 days, compared with 18 days in 1903, 23 days in 1902, only 6 days in 1901, only 6 days in 1900, 19 days in 1899, 9 in 1898, 14 in 1897, 21 in 1896, and 15 in 1895. It fell to 32° in the screen on 3 nights, and on the 19th it rose to 60·8°. The minima on the grass were 32° or less on 13 nights, compared with 4 nights in 1903, 5 nights in 1902, 11 nights in 1901, 14 nights in 1900, 13 in 1899, 15 in 1898, 9 in 1897, 8 in 1896, and 10 in 1895. The thermometer twice failed to reach 40° (on the 1st and 4th).

The rainfall in Dublin during the three months ending March 31st amounted to 7·938 inches on 56 days, compared with 9·126 inches on 61 days in 1903, 5·114 inches on 48 days in 1902, 5·656 inches on 46 days in 1901, 6·698 inches on 63 days in 1900, only 1·650 inches on but 32 days in 1891, and a thirty-five years' (1866-1900 inclusive) average of 6·170 inches on 50·0 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29·967 inches, the highest reading observed being 30·461 inches at 9 p.m. of the 23rd, the lowest, 29·250 inches at 9 p.m. of the 29th. The mean temperature was 42·3°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 42·2°. Rain fell on 15 days to the amount of 2·112 inches, 500 inch being measured on the 7th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 89·75, giving a daily average of 2·9 hours. The corresponding figures for January, 1904, were 45·25 hours and 1·46 hours, and for February, 37·25 hours and 1·28 hours.

Mr. R. Cathcart Debbie, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, 2·615 inches of rain fell on 17 days. The corresponding figures for March, 1900, are 1·320 inches of rain on 14 days; for 1901, 1·840 inches on 14 days; for 1902, 1·660 inches on 17 days; and for 1903, 5·050 inches on 25 days. The maximal fall in 24 hours was 3·50 inch on the 7th. The total rainfall since January 1, 1904, equals 8·107 inches on 53 days, compared with 11·756 inches on 58 days in the first quarter of 1900, 7·260 inches on 41 days in the same period of 1901, 6·110 inches on 34 days in 1902, and 11·230 inches on 54 days in 1903.

Dr. B. H. Steede, M.D., D.P.H., reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 2·606 inches on 17 days, compared with 5·188 inches on 30 days in 1903, 1·417 inches on 19 days in 1902, 1·798 inches on 14 days in 1901, 8·82 inch on 12 days in 1900, and 1·054 inches on 9 days in 1899. On the 7th 5·50 inch fell, and on the 8th 3·56 inch. The total rainfall at this station from January 1 to March 31, inclusive, was 10·323 inches on 59

days, compared with 13,603 inches on 55 days in the first quarter of 1903, 6,006 inches on 41 days in the same period of 1902, 6,635 inches on 39 days in that of 1901, 10,431 inches on 37 days in that of 1900, 9,929 inches on 43 days in that of 1899, 4,767 inches on 40 days in that of 1898, and 10,088 inches on 57 days in that of 1897. The extremes of temperature were—highest, 57° on the 19th; lowest, 30° on the 11th.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 21 days to the amount of 230 inches, compared with 220 inches on 13 days in March, 1901, 196 inches on 18 days in 1902, and 453 inches on 28 days in 1903. The greatest daily rainfall was 73 inch on the 7th. The temperature in the shade ranged from 59°, on the 19th, to 39° on the 11th and 13th. The mean shade temperature was 41½°, compared with 41½° in 1901, 45½° in 1902, and 48½° in 1903. Since January 1st, 1904, the rainfall at this station amounts to 1014 inches on 67 days, compared with 671 inches on 40 days in the first quarter of 1901, 702 inches on 43 days in 1902, and 1136 inches on 62 days in 1903.

The rainfall at Clonsilla, Kildney, Co. Dublin, as returned by Mr. Robert O'B. Farlow, C.B., was 201 inches on 17 days, compared with 340 inches on 29 days in 1903, 150 inches on 21 days in 1902, 157 inches on 17 days in 1901, 94 inch on 14 days in 1900, and a nineteen years' (1885-1903) average of 1,848 inches on 163 days. The maximum in the 19 years was 359 inches in 1888, the minimum was 26 inch in 1893. The heaviest fall in 24 hours was 48 inch on the 7th. At this station the total rainfall since January 1 was 799 inches on 54 days, compared with a fall of 817 inches on 62 days in the first quarter of 1900, 896 inches on 45 days in that of 1901, 847 inches on 45 days in that of 1902, and 830 inches on 64 days in that of 1903. Snow or sleet or hail was noticed on the 1st, 6th, 13th, and 29th.

At the Railway Hotel, Recess, Consemara, Co. Galway, Mr. A. A. Smith recorded a rainfall in March of 4160 inches on 16 days, compared with 5400 inches on 27 days in 1903, 8860 inches on 20 days in 1902, 4285 inches on 14 days in 1901, and 1311 inches on 13 days in 1900. The maximal falls in 24 hours were 510 inch on the 26th and again on the 30th. Delightful weather was enjoyed during the first 11 days of the month, but from the 12th rain and wind prevailed, and the closing days were very boisterous, cold and wet. Snow and severe hail storms were experienced on the 29th and 30th.

At Wellesley-terrace, Cork, Mr. W. Miller reports that the March rainfall was 255 inches on 17 days. The greatest day's fall was 97½ inch on the 20th. The rainfall was 09 inch over the average.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 19 days to the amount of 2303 inches, of which 640 inch was measured on the 7th.

Dr. J. Byrne Power, F. R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 42.8°, being 1½° below the average for the month during the previous 6 years, the extremes being—highest, 61.3° on the 19th; lowest, 28.6° on the 11th, and 15th. At Bournemouth the mean was 42.7°, the extremes being—highest, 59° on the 10th; lowest, 29° on the 1st. The average mean temperature for each and every one of the winter months of November, December, January, February and March during the past six years was considerably higher at Kingstown than at Bournemouth, the average mean for the five months during the previous six years being—at Kingstown, 44.3°, and at Bournemouth, 43.0°. This relative condition of temperature is now becoming reversed as the summer solstice approaches, and from that period the summer heat becomes intense, and at times very oppressive, on the south coast of England, while at Kingstown it will be comparatively cool. The mean daily range of temperature for the month at Kingstown was 10.8°, at Bournemouth it was 11.7°. The rainfall at Kingstown was 17 inches on 17 days, and at Bournemouth, 147 inches on 13 days. The total duration of bright sunshine was 998 hours at Kingstown, 1026 hours at Phoenix Park, 1066 hours at Valentia, 887 hours at Parsonstown, 911 hours at Southport, and 907 hours at Eastbourne.

April.—April, 1904, was a favourable though changeable month. Both temperature and bright sunshine were above the average, and the rainfall, while frequent, was moderate in amount. The first few days were indeed stormy, cold and showery—Easter Day, the 3rd, being particularly inclement, with squalls and frequent showers of sleet and hail. After the 9th, however, the rainfall on the east coast of Ireland was small, amounting in the City of Dublin to only 282 inch. The duration of bright sunshine was estimated at 1785 hours, compared with 306 hours in April, 1901, 1994 hours in 1902, and 137½ hours in 1903. The daily average duration of sunshine was 5.86 hours.

In Dublin the arithmetical mean temperature (49.1°) was 1° above the average (48°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 47.8°. In the forty years ending with 1904, April was coldest in 1879 (the cold year) (M. T. = 44.5°), and warmest in 1893 (M. T. = 51.4°).

The mean height of the barometer was 29.884 inches, or 0.034 inch above the average value for April—namely, 29.850 inches. The mercury rose to 30.313 inches at 9 a.m. of the 21st, and fell to 29.103 inches at 9 a.m. of the 13th. The observed range of atmospheric pressure was, therefore, 1.210 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 47.8°, or 5° above the value for March, 1904. Using the formula, $\text{Mean Temp.} = \text{Max.} + (\text{Max.} - \text{Min.}) \times .476$, the value is 48.7°, or 1½° above the average mean temperature for April, calculated in the same way, in the thirty years, 1871-1900 inclusive, (47.3°). The arithmetical mean of the maximal and minimal readings was 49.1°, compared with a thirty years' (1871-1900 inclusive) average of 47.6°. On the 27th the thermometer in the screen rose to 65.0°—wind, W.; on the 21st the temperature fell to 35.7°—wind, N.W. The minimum on the grass was 32.1°, also on the 21st.

The rainfall was 1118 inches, distributed over 19 days. The average rainfall for April in the thirty-five years, 1868-1900, inclusive, was 1560 inches, and the average number of rainy days was 16. The rainfall, therefore, fell short of the average, while the number of rainy days exceeded it. In 1877 the rainfall in April was very large—4767 inches on 21 days. On the other hand, in 1873, only 496 inch was measured on 8 days. In 1902, 2961 inches fell on 16 days, and in 1903, 1050 inches on 17 days.

Fog was observed on the 19th only. High winds were noted on as many as 17 days, reaching the force of a gale on the 1st, 2nd, 3rd, 5th and 9th. Hail fell on the 1st, 3rd, 9th and 22nd; snow or sleet on the 1st and 3rd. The temperature rose to or above 40° in the screen on four days (the 8th, 14th, 27th and 29th). It failed to reach 50° on the 1st only. It never fell to 32° in the screen, and on only one night (the 21st) did it fall to or below 32° on the grass. The mean lowest temperature on the grass was 39.1° , compared with 37.0° in 1903, 36.8° in 1902, 37.3° in 1901, 39.0° in 1900, 37.8° in 1899, 40.2° in 1898, 37.7° in 1897, 40.6° in 1895, 37.8° in 1896, 40.0° in 1894, 38.2° in 1893, 37.6° in 1892, 34.1° in 1891 and 1890, 34.9° in 1889, 34.6° in 1888, and 31.0° in 1887.

The rainfall in Dublin during the four months ending April 30th amounted to 9.086 inches on 74 days, compared with 10.178 inches on 78 days in 1903, 7.175 inches on 59 days in 1902, 6.520 inches on 58 days in 1901, 8.002 inches on 79 days in 1900, 7.557 inches on 71 days in 1899, 7.238 inches on 64 days in 1898, 9.564 inches on 79 days in 1897, 5.751 inches on 53 days in 1896, 10.233 inches on 65 days in 1895, only 3.203 inches on 46 days in 1894, and a thirty-five years' average of 8.120 inches on 69 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29.878 inches, the highest reading observed being 30.313 inches at 9 a.m. of the 21st, the lowest 29.104 inches at 9 a.m. of the 13th. The mean temperature was 48.8° , the mean dry-bulb reading at 9 a.m. and 9 p.m. being 48.0° . Rain fell on 16 days to the amount of 1.125 inches, 190 inch being measured on the 2nd. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 168, giving a daily average of 5.6 hours. The corresponding figures for January, 1904, were 45.25 hours and 1.45 inches; for February, 37.25 hours and 1.28 inches, and for March, 89.75 hours and 2.9 inches.

Dr. B. H. Steeds, M.D., D.P.H., reports that at the National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 1.967 inches on 15 days, compared with 1.830 inches on 17 days in 1903, 3.017 inches on 13 days in 1902, and 1.178 inches on 12 days in 1901. The heaviest fall in 24 hours was 4.45 inch on the 2nd. Since January 1st, 1904, 11.590 inches of rain have been measured on 74 days. The maximal shade temperature was 61.0° on the 29th, the minimal reading was 36.3° on the 1st.

Mr. R. Outhart Dublin, J.P., reports that at Knockdohane, Greystones, Co. Wicklow, the rainfall amounted to only .930 inch on 14 days, compared with 2.900 inches on 15 days in 1903, 3.105 inches on 14 days in 1902, and 1.745 inches on 9 days in 1901. The heaviest fall in 24 hours was .250 inch on the 2nd. The total rainfall in 1904, up to April 30th, was 9.037 inches on 68 days, compared with 12.285 inches on 68 days in 1903, 9.215 inches on 48 days in 1902, 10.060 inches on 56 days in 1901, 13.191 inches on 70 days in 1900, 12.380 inches on 70 days in 1899, 8.890 inches on 56 days in 1898, 15.060 inches on 80 days in 1897, and only 5.688 inches on 59 days in 1896.

According to Mr. Robert O'Brien Farling, C.B., at Clonsilla, Killybeg, Co. Dublin, 1.03 inches of rain fell on 15 days. The maximal fall in 24 hours was .20 inch on the 7th. After the 8th only .50 inch fell. Hail fell on the 3rd and 9th. The average rainfall in April of the nineteen years, 1885-1903, was 1.813 inches on 14.3 days. Since January 1st, 1904, 9.02 inches of rain fell at this station on 59 days, compared with 9.67 inches on 76 days in 1903, 8.08 inches on 59 days in 1902, 7.63 inches on 59 days in 1901, 9.25 inches on 77 days in 1900, 9.02 inches on 65 days in 1899, 7.74 inches on 61 days in 1898, 10.36 inches on 83 days in 1897, 8.27 inches on 55 days in 1896, and 1.728 inches on 66 days in 1895.

Dr. Arthur S. Goff reports the rainfall at Lynton, Dunderum, Co. Dublin, as 1.48 inches on 18 days, compared with 1.85 inches on 16 days in 1903, 2.43 inches on 16 days in 1902, and 1.19 inches on 12 days in 1901, the greatest daily rainfall being .23 inch on the 2nd. The mean shade temperature was 48.9° , compared with 48.3° in 1901, 48.6° in 1902, and 45.9° in 1903. The thermometric range was from 52° on the 29th to 36° on the 1st. Hail showers fell on the 1st, 9th, and 22nd.

At the Railway Hotel, Rosess, Connemara, Co. Galway, Mr. Albert A. Smith returns the rainfall at 4.639 inches on 25 days, 5.10 inch being recorded on the 13th. Heavy showers of hail occurred frequently, and the weather was generally cold and windy.

At the Ordnance Survey Office, Phoenix Park, Dublin, 1.351 inches of rain fell on 18 days, the greatest rainfall in 24 hours being .260 inch on the 3rd.

In Cork, according to Mr. W. Miller, the rainfall amounted to 1.28 inches on 15 days, 20 inch being measured on the 17th. Since January 1st, 1904, 14.91 inches of rain have fallen in Cork, against an average for the first four months of the year of 12.78 inches.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health for Kingstown, reports that the mean temperature at that health resort was 48.6° , being 2.6° above the average for April during the previous 6 years, the extremes being—highest, 63.2° on the 27th, lowest, 36.5° on the 10th. At Bournemouth the mean was 50° , the extremes being—highest, 66° on the 9th, 20th and 21st; lowest, 37° on the 18th. The mean daily range was 11.7° , at Bournemouth it was 14.2° . The mean humidity was 75 per cent. The mean temperature of the sea at Sandycove bathing place was 44.4° , being 0.2° above the average for April during the previous 6 years. The rainfall at Kingstown was 1.04 inches on 16 days, being 0.94 below the average of 14 previous years (1873-83) and (1901-03). The total duration of bright sunshine was 1813 hours at Kingstown, 174 hours at the Ordnance Survey Office, Phoenix Park, 1134 hours at Valentia, 1423 hours at Portmarnock, 1688 hours at Southport, 1842 hours at Bournemouth, and 1456 hours at Eastbourne.

MAY.—May, 1904, was in general a favourable month. The first week, however, proved unsettled, windy and at times rainy. At its close the weather was extremely cold, and the mean temperature of Sunday, the 8th, was only 43.8° , the thermometric range being from 37.5° to 51.6° , showers of hail and "grape" falling at frequent intervals, and the wind blowing keenly from N.

In the course of the second week the season passed from winter to summer. On Monday, the 16th, a transient heat wave sent the thermometer up to 99° at Bismarck, 91° at Rochefort, 87° at Lyons, 80° in Paris, 75° in London, and 70° even in Dublin. From the 24th to the end of the month the weather was fine in the neighbourhood of Dublin, but changeable and dull in the S.E. of England and the Thames valley. Curiously, the heaviest rainfall credited to the month (1.092 inches) fell after midnight on the morning of the 1st of June. Were it not for this accident the rainfall of the month would have been below average. The estimated duration of bright sunshine was 195.75 hours, compared with 178.5 hours in 1903, 178.75 hours in 1902, and 305.25 hours in 1901. The daily mean duration of sunshine was 6.3 hours, compared with 5.76 hours in May, 1903.

In Dublin the arithmetical mean temperature (53.0°) was 0.9° above the average (52.1°). The mean dry-bulb readings at 9 a.m. and 9 p.m. were 51.7°, a value identical with that for May, 1903. In the forty years ending with 1904, May was coldest in 1869 (M. T. = 52.7°), and warmest in 1893 (M. T. = 56.7°). In 1902 the M. T. was 49.9°; in 1903 it was 52.9°.

The mean height of the barometer was 29.899 inches, or 0.090 inch below the corrected average value for May—namely, 29.989 inches. The mercury rose to 30.733 inches at 9 p.m. of the 18th, having fallen to 29.502 inches at 3 p.m. of the 1st. The observed range of atmospheric pressure was, therefore, only 0.731 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was (as in 1903) 51.7°, or 3.9° above the value for April, 1904—47.8°. Using the formula, $\text{Mean Temp.} = \text{Min.} + (\text{Max.} - \text{Min.}) \times .47$, the value is (as in May, 1903) 52.5°, or 0.8° above the average mean temperature for May, calculated in the same way, in the thirty years, 1871-1900, inclusive (51.7°). The arithmetical mean of the maximal and minimal readings was 53.9°, compared with a thirty years' average of 53.1°. On the 16th the thermometer in the screen rose to 89.6°—wind, S.W.; on the 8th the temperature fell to 37.3°—wind, N. The minimum on the grass was 35.1°, also on the 8th.

The rainfall amounted to 2.685 inches, distributed over 18 days. The average rainfall for May in the thirty-five years, 1866-1900, inclusive, was 2.020 inches, and the average number of rainy days was 15. The rainfall and the rainy days were, therefore, both above the average. In 1886 the rainfall in May was very large—5.472 inches on 21 days; in 1893, also, 5.414 inches fell on 19 days. On the other hand, in 1895, only 1.17 inch was measured on but 5 days. In 1896 the fall was only 1.80 inch on 7 days. In 1903, 2.384 inches fell on 17 days.

A solar halo appeared on the 30th. High winds were noted on 9 days, and attained the force of a gale on the 1st, 2nd and 5th. Hail fell on the 7th, 8th and 17th. There were slight frosts on the morning of the 4th, and at night on the 28th. Thunder was heard on the 22nd.

During the month the thermometer did not fall below 32° in the screen or on the grass. The mean minimal temperature on the grass was 43.6°, 41.7° in 1901, 41.6° in 1900, 40.6° in 1899, 42.3° in 1898, and 37.6° in 1894. The maximum reached or exceeded 60° on 15 days, but never fell short of 56°.

The rainfall in Dublin during the five months ended May 31st amounted to 11.741 inches on 92 days, compared with 13.560 inches on 95 days in 1903, 9.973 inches on 81 days in 1902, 7.724 inches on 67 days in 1901, 9.921 inches on 92 days in 1900, 9.637 inches on 87 days in 1899, 10.558 inches on 84 days in 1898, 10.693 inches on 93 days in 1897, 9.971 inches on 70 days in 1896, 10.410 inches on 88 days in 1895, and a thirty-five years' average of 10.140 inches on 80 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29.897 inches, the highest reading observed being 30.733 inches at 9 p.m. of the 18th, the lowest, 29.499 inches at 3 p.m. of the 1st. The arithmetical mean temperature was 52.1°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 51.6°. Rain fell on 16 days to the amount of 2.687 inches, 1.092 inches being measured on the 31st. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 192.5, giving a daily average of 6.2 hours. The corresponding figures for January, 1904, were 45.25 hours and 1.46 hours; for February, 37.25 hours and 1.22 hours; for March, 89.75 hours and 2.9 hours; and for April, 168 hours and 5.6 hours.

At Knockdohane, Greystones, Co. Wicklow, the rainfall, measured by Mr. R. Cathcart Dobbs, J.P., was 2.990 inches, distributed over 16 days—1.000 inch falling on the 31st, and .750 inch on the 1st. The total fall since January 1st, 1904, equals 12.027 inches on 84 days, compared with 15.655 inches on 79 days in 1903, 11.700 inches on 68 days in 1902, 11.905 inches on 66 days in 1901, 16.381 inches on 84 days in 1900, 15.475 inches on 85 days in 1899, 12.445 inches on 78 days in 1898, 14.130 inches on 90 days in 1897, 57.6 inches on 33 days in 1896, and 12.845 inches on 58 days in 1895.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dunedrum, Co. Dublin, as 2.46 inches on 18 days, compared with 2.85 inches on 18 days in 1903, 3.28 inches on 23 days in 1902, and 1.09 inches on 10 days in 1901. The greatest daily measurement was 1.05 inches on the 31st. The temperature in the shade ranged from 69° on the 29th to 38° on the 8th. The mean temperature of the month was 53.3°, compared with 53.1° in 1903, 50.5° in 1902, and 52.6° in 1901.

Dr. B. H. Steede, M.D., reports that at the Royal National Hospital for Consumption, New castle, Co. Wicklow, the rainfall for the month was 2.903 inches on 18 days, .804 inch being registered on the 31st, and .564 inch on the 1st. Since January 1st, 1904, 14.438 inches of rain have fallen at this station on 92 days. The highest temperature in the shade was 65.1° on the 12th and 28th, and the lowest was 35.2° on the 8th.

According to Mr. Robert O'B. Furlong, C.B., the rainfall at Cloacavin, Killybeg, was 2.48 inches on 15 days, compared with 2.54 inches on 15 days in 1903, 2.38 inches on 21 days in 1902, and 1.20 inches on 10 days in 1901. The maximal fall in 24 hours was 1.07 inches on the 31st. The average rainfall in May at this station during the 19 years, 1885-1903 inclusive, was 2.087

inches on 137 days. Since January 1st, 1904, 11.50 inches of rain have fallen at Clonsilla on 34 days. From May 9th to 30th only 25 inch fell.

At Cork Mr. Wm. Miller returns the rainfall at 226 inches on 18 days, or 0.08 inch over the average for May. The greatest day's rainfall was 0.40 inch on the 4th. Up to May 31st, the rainfall of 1904 at Cork amounted to 17.17 inches, or 2.21 inches above the average.

At the Railway Hotel, Roscom, Connemara, Co. Galway, Mr. A. A. Smith reports that rain fell on 90 days to the amount of 3.35 inches, the maximal daily measurement being .940 inch on the 5th. In May, 1903, the rainfall was 3.100 inches on 15 days.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 18 days to the amount of 2.339 inches, the greatest measurement in 24 hours being 1.140 inches on the 31st. The total amount of bright sunshine was 2075 hours, the largest daily amount being 147 hours on the 29th.

Dr. J. Byrne Power, F.R. Met. Soc., Superintendent Medical Officer of Health, Kingstown, reports that the mean temperature at that health resort was 52.4°, being 0.7° above the average for May during the previous 6 years. The extremes were—highest, 69.3° on the 12th; lowest, 37.5° on the 8th. At Bournemouth the mean was 50.9°, the extremes being—highest, 69° on the 31st; lowest, 39° on the 5th and 11th. The mean daily range of temperature was 13.3°, and 14.7° at Bournemouth. The relative humidity of the atmosphere was 77 per cent. The total rainfall was 2.07 inches on 14 days, of which amount 1.08 inches fell between midnight on the 31st, and 9 a.m. on June 1st, at Bournemouth it amounted to 2.35 inches on 18 days. The total duration of bright sunshine was 177½ hours, compared with 207½ hours at the Ordnance Survey Office, Phoenix Park, 157½ hours at Valencia, 151 hours at Parnestown, 153½ hours at Southport, 151½ hours at Bournemouth, and 154½ hours at Eastbourne.

June.—June, 1904, was an uneventful and in all respects a favourable month. A moderate rainfall was distributed over some 10 days. The mean temperature was very nearly up to the average, and a deficiency of cloud caused rather low readings of the terrestrial radiation thermometer by night, but a corresponding high day temperature and a large percentage of bright sunshine. The amount of cloud was 53.2 per cent. at 9 a.m. and 9 p.m. The estimated duration of bright sunshine was 242.35 hours, or a daily average of 8.08 hours.

In Dublin the arithmetical mean temperature (57.8°) was below the average (58.0°) by 0.2°; the mean dry-bulb readings at 9 a.m. and 9 p.m. were 56.7°. In the forty years ending with 1904, June was coldest in 1882 (M. T. = 55.8°) and 1879 ("the cold year") (M. T. = 55.9°). It was warmest in 1857 (M. T. = 62.3°); in 1896 (M. T. = 61.4°); and in 1899 (M. T. = 61.3°). In 1903 the M. T. was 56.4°.

The mean height of the barometer was 30.030 inches, or 0.103 inch above the corrected average value for June—namely, 29.917 inches. The mercury rose to 30.393 inches at 9 a.m. of the 22nd, and fell to 29.292 inches at 9 p.m. of the 14th. The observed range of atmospheric pressure was, therefore, 1.101 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 56.7°, or 50° above the corresponding M. T. for May, 1904. Using the formula, $\text{Mean Temp.} = \text{Min.} + (\text{Max.} - \text{Min.}) \times .405$, the value was 57.3°, or 0.5° below the average mean temperature for June, calculated in the same way, in the thirty years, 1871-1900, inclusive (57.8°). The arithmetical mean of the maximal and minimal readings was 57.8°, compared with a thirty years' average of 58.0°. On the 30th the thermometer in the screen rose to 72.0°—wind S.W. W. on the 27th the temperature fell to 45.1°—wind, N.W. The minimum on the grass was 41.7° on the 27th.

The rainfall amounted to 1.076 inches on 10 days. The average rainfall for June in the thirty-five years, 1865-1900, inclusive, was 1.920 inches, and the average number of rainy days was 15. The rainfall, therefore, and also the rainy days were considerably below average. In 1878 the rainfall in June was very large—5.008 inches on 19 days; in 1879, also, 4.046 inches fell on 24 days. On the other hand, in 1889, only .100 inch was measured on 5 days. In 1887 the rainfall was only .252 inch, distributed over 5 days. In 1903, 2.494 inches fell on 15 days.

High winds were noted on 11 days, but reached the force of a gale only on the 16th. A solar halo was seen on the 13th. Temperature reached or exceeded 70° in the screen on 14 days—the 4th, 13th, 25th and 30th—compared with 3 days in 1903, only one day in 1901, and 8 days in 1902. Lightning was seen on the night of the 9th.

The rainfall in Dublin during the six months ending June 30th amounted to 12.837 inches on 102 days, compared with 12.054 inches on 108 days in 1903, 12.344 inches on 98 days in 1902, 9.352 inches on 80 days in 1901, 13.090 inches on 114 days in 1900, 11.295 inches on 96 days in 1899, 12.115 inches on 98 days in 1898, 13.950 inches on 113 days in 1897, 7.894 inches on 84 days in 1896, 12.282 inches on 80 days in 1895, 14.361 inches on 109 days in 1894, 9.024 inches on 78 days in 1893, only 6.741 inches on 67 days in 1887, and a thirty-five years' average of 12.050 inches on 95.0 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30.030 inches, the highest reading observed being 30.394 inches at 9 a.m. of the 22nd, the lowest, 29.292 inches at 9 p.m. of the 14th. The arithmetical mean temperature was 57.0°, the mean dry-bulb reading at 9 a.m. and 9 p.m. being 56.8°. Rain fell on 9 days to the amount of 1.035 inches, .325 inch being measured on the 10th, and .225 inch on the 9th. The number of hours of bright sunshine registered by the Campbell-Stokes sunshine recorder was 231½, giving a daily average of 7.7 hours. The corresponding figures for January, 1904, were 45.25 hours and 14.0 hours; for February, 37.25 hours and 12.8 hours; for March, 89.75 hours and 2.9 hours; for April, 148 hours and 5.5 hours; and for May, 192.5 hours and 6.2 hours.

Mr. B. Clouston Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 2.280 inches on 10 days, compared with 3.361 inches on 16 days in June, 1902, and 1.785 inches on 11 days in 1903. The heaviest rainfall in 24 hours was .560 inch on the 9th, besides

which 430 inch fell on the 14th, and 430 inch on the 24th. The total fall since January 1 has been 14,307 inches on 94 days, compared with 17,440 inches on 90 days in the first six months of 1903, 15,091 inches on 84 days in 1902, 13,670 inches on 75 days in 1901, 18,191 inches on 105 days in 1900, 19,510 inches on 95 days in 1899, 13,990 inches on 88 days in 1898, 18,125 inches on 106 days in 1897, 7,354 inches on 61 days in 1896, and 14,270 inches on 47 days in 1895.

Dr. Arthur S. Geff returns the rainfall at Lynton, Dundry, Co. Dublin, at 122 inches on 14 days, compared with 154 inches on 12 days in 1903, 308 inches on 19 days in 1902, and 171 inches on 18 days in 1901. The greatest daily fall was 33 inch on the 14th. The mean shade temperature was 59.1°. The thermometric range was from 46° on the 27th to 75° on the 29th.

The rainfall recorded at Clonsilla, Killybeg, Co. Dublin, by Mr. R. O'B. Furlong, C.B., was 142 inches on 11 days. The maximal fall in 24 hours was 48 inch on the 14th. The average rainfall in June in the 19 years (1885-1903) was 1,327 inches on 132 days. The total fall at Clonsilla since January 1, 1904, amounts to 1,292 inches on 95 days.

At the Railway Hotel, Roscom, Connemara, Co. Galway, Mr. A. A. Smith reports that the rainfall was 2,655 inches on 14 days. On the 14th, 820 inch fell; and on the 28th, 700 inch. Fair weather was generally prevalent, although the individual rainfalls were heavier than usual.

Mr. W. Miller returns the rainfall at Wellinny-terrace, Cork, at 217 inches on 9 days—this amount falling short of the average for June by 62 inch. The greatest rainfall in 24 hours was 47 inch on the 14th. The rainfall of the first six months of 1904 in Cork was 1934 inches, or 159 inches in excess of the average.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell in June on 10 days to the total amount of 1,475 inches, 440 inch being registered on the 17th. The duration of bright sunshine was 331 hours, the most in one day being 145 hours on the 5th.

Dr. J. Byrne Power, D.P.H., F.R. Med. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 56.7°, being 1.3° above the average for June during the previous 8 years, the extremes being—highest, 72.2° on the 3rd; lowest, 47.9° on the 4th. At Bournemouth the mean was 58.7°, the extremes being—highest, 74° on the 6th; lowest, 44° on the 9th. These figures again confirm the statement in former reports—*i.e.*, that the relative conditions of temperature at Kingstown and at Bournemouth, as well as at all stations on the south-coast of England, east of the Start Point in Devonshire, become reversed at or about the summer solstice, the heat at all these English stations becoming excessive during July, August, and September, while at Kingstown it will be comparatively cool. The mean daily range of temperature at Kingstown was 12.7°, and at Bournemouth 16.7°. The mean humidity of the atmosphere was 75 per cent. The mean temperature of the sea at Sandycove bathing-place was 53.3°. The rainfall was 1.33 inches on 10 days, and at Bournemouth it was 0.92 inches on 9 days. The total rainfall for the first 6 months of the present year at Kingstown amounted to 1,299 inches, being 1.01 inches above the average for 14 previous years 1873-83, and (1900-3). The total duration of bright sunshine was 2307 hours at Kingstown, 2311 hours at Ordnance Survey Office, Phoenix Park, 183.0 hours at Parnestown, 174.4 hours at Valentia, 214 hours at Southport, 196.3 hours at Eastbourne, and 223.5 hours at Bournemouth. The total duration of bright sunshine during the first 6 months of the present year was 7805 hours at Kingstown, 8112 hours at the Phoenix Park, 6453 hours at Valentia, 6329 hours at Parnestown, 7011 hours at Southport, and 6750 hours at Eastbourne.

JULY.—A warm and generally favourable month, rain falling frequently indeed, but in Dublin on no occasion very heavily. After a long spell of dry and hot weather, the fourth week (ending on Saturday, the 30th) was gloomy and very wet in central England and the Thames Valley—the rainfall of this week was 2.88 inches on 6 days at Oxford, compared with 2.92 inch on 4 days in Dublin. The spell of broken weather in England was ushered in by severe and fatal thunderstorms on Monday, 25th. In Dublin the only electrical disturbances of the month occurred on the 19th, on which day the sky bore a very threatening aspect. On the 30th, 2.15 inches of rain fell at Hillington, in Norfolk, during a thunderstorm. The duration of bright sunshine was estimated at 1127 hours, or a daily average of 6.8 hours, compared with a twenty years' average (1881-1900) of 1685 hours recorded at the Ordnance Survey Office, Phoenix Park.

In Dublin the arithmetical mean temperature (51.6°) was above the average of the 30 years 1871-1900 (50.3°), the mean dry-bulb readings at 9 a.m. and 9 p.m. were 59.4°. In the forty years ending with 1904, July was coldest in 1879 ("the cold year") (M. T. = 57.5°). It was warmest in 1887 (M. T. = 63.7°); in 1898 ("the warm year") and in 1901 (M. T. = 63.5°). In 1900 the M. T. was 63.4°; in 1903, it was 60.1°.

The mean height of the barometer was 29.958 inches, or 0.055 inch above the corrected average value for July—*i.e.*, 29.915 inches. The mercury rose to 30.290 inches at 9 p.m. of the 12th, and fell to 29.635 inches at 9 a.m. of the 1st. The observed range of atmospheric pressure was, therefore, only 655 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59.4°, or 5.2° above the value for June, 1904. Using the formula, *Mean Temp.* = *Max.* + (*Min.* - *Min.*) × .465, the value was 61.1°, or 1.3° above the average mean temperature for July, calculated in the same way, in the thirty years, 1871-1900 inclusive, (59.8°). The arithmetical mean of the maximal and minimal readings was 61.8°, compared with a thirty years' average of 60.8°. On the 30th, the thermometer in the screen rose to 74.7°—wind, S.W.; on the 7th the temperature fell to 48.0°—wind, W.N.W. The minimum on the grass was 48.5°, also on the 7th.

The rainfall was only 1.088 inches, distributed, however, over 15 days. The average rainfall for July in the thirty-five years 1866-1900, inclusive, was 2.560 inches, and the average number of rainy days was 18. The rainfall, therefore, and the rainy days were much below the average. In 1895 the rainfall in July was very large—6.087 inches on 24 days; in 1896, also, 5.474 inches fell on 18 days. On the other hand, in 1870, only 539 inch was measured on 8 days; in 1869, the fall

was only 739 inch on 9 days; and in 1868, 741 inch fell on but 5 days. In 1903, 4018 inches fell on 23 days.

High winds were noted on 6 days, but never attained the force of a gale. Temperature reached or exceeded 70° in the screen on 10 days, compared with 7 days in July, 1903, and the same number of days in July, 1902. In July, 1887, temperature reached or exceeded 70° in the screen on no fewer than 17 days. In 1888 the maximum for July was only 68.7°. The thermometer never failed to reach 60°.

Thunder was heard on the 19th; lightning was seen on the night of the same day. There was also a thunderstorm on the 19th. The atmosphere was foggy on the 22nd, 23rd, and 24th.

The rainfall in Dublin during the seven months ending July 31st amounted to 13,905 inches on 117 days, compared with 19,072 inches on 131 days in 1903, 15,507 inches on 115 days in 1902, 11,482 inches on 93 days in 1901, 17,505 inches on 123 days in 1900, 14,416 inches on 107 days in 1899, 13,060 inches on 105 days in 1898, 15,600 inches on 125 days in 1897, 13,328 inches on 102 days in 1896, 16,785 inches on 95 days in 1895, 7,935 inches on 80 days in 1887, and a thirty-five years' average of 14,630 inches on 113 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29.938 inches, the range of atmospheric pressure being from 29.629 inches at 9 a.m. of the 1st to 30.296 inches at 9 p.m. of the 17th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 60.1°. The arithmetical mean of the daily maximal and minimal temperatures was 60.3°. The screened thermometers rose to 74.9° on the 20th, and fell to 47.9° on the 7th. On this latter date the grass minimum was 42.9°. On the 30th the black ball *in vacuo* rose to 135.1°. Rain fell on 14 days to the amount of 1,064 inches, the greatest fall in 24 hours being 300 inch on the 15th. The duration of bright sunshine, according to the Campbell-Stokes recorder was 201 hours, of which 14½ occurred on the 7th and the same number on the 8th.

At Knockdolian, Greystones, Co. Wicklow, the rainfall in July was 1,395 inches on 13 days, compared with 2,790 inches on 17 days in 1903, 4,550 inches on 11 days in 1902, 2,390 inches on 10 days in 1901, 5,140 inches on 18 days in 1900, 3,480 inches on 14 days in 1899, 1,145 inches on 6 days in 1898, 1,625 inches on 10 days in 1897, 5,736 inches on 18 days in 1896, and 3,680 inches on 16 days in 1895. Of the total rainfall 280 inch fell on the 14th. The total fall since January 1st has been 15,702 inches on 109 days, compared with 20,230 inches on 107 days in 1903, 19,641 inches on 95 days in 1902, 16,060 inches on 85 days in 1901, 23,331 inches on 120 days in 1900, 22,990 inches on 109 days in 1899, 14,645 inches on 94 days in 1898, 19,750 inches on 115 days in 1897, 13,083 inches on 77 days in 1896, and 17,990 inches on 83 days in 1895.

At Glencoevin, Kilkenny, Co. Dublin, the rainfall in July was only 77 inch on 15 days, compared with a nineteen years' (1886-1903) average of 2,673 inches on 153 days. On the 16th the rainfall was 13 inch. In July, 1903, 3.54 inches fell on 19 days, in 1902, 3.64 inches on 13 days, in 1901, 2.80 inches on 18 days; in 1900, 4.65 inches on 18 days, in 1899, 3.48 inches on 17 days, in 1898, 8.4 inch on 7 days; in 1897, 1.28 inches on 10 days, in 1896, 6.72 inches on 20 days; in 1895, 3.58 inches on 17 days. Since January 1st, 1904, 13.69 inches of rain have fallen on 110 days at this station, compared with 18.35 inches on 129 days in the corresponding 7 months of 1900, 13.54 inches on 95 days in 1901, 16.90 inches on 111 days in 1902, and 17.39 inches on 132 days in 1903.

Dr. Arthur S. Goff reports that at Lynton, Dundry, County Dublin, the rainfall was 1.22 inches on 17 days. The maximal fall in 24 hours was 31 inch, measured on the 15th. The mean temperature was 63.6°, the range being from 79° on the 8th to 51° on the 7th. In July, 1901, 2.65 inches of rain fell at this station on 11 days, in July, 1902, 4.27 inches on 19 days, and in July, 1903, 3.56 inches on 24 days.

Dr. B. H. Steede reports that at the National Hospital for Consumption, Newcastle, Co. Wicklow, the July rainfall was 2,254 inches on 17 days, compared with 3,796 inches on 13 days in 1902, and 4,309 inches on 23 days in 1901. The maximal temperature in the shade was 71.9° on the 6th, the minimal shade temperature was 43.0° on the 2nd. The heaviest daily rainfalls were 440 inch on the 18th, and 410 inch on the 14th. At this station the rainfall in June was 2,494 inches on 12 days, the thermometer rose to 68.3° in the screen on the 4th, and fell to 48.0° on the 27th. The rainfall from January 1st to July 31st, inclusive, was 19,245 inches on 121 days, compared with 18,274 inches on 108 days in the first seven months of 1902, and 23,855 inches on 180 days in that period of 1903.

At the Royal Botanic Gardens, Glencoevin, Dublin, rain fell on 14 days to the amount of 1.33 inches, the greatest rainfall in 24 hours being 37 inch on the 25th.

The rainfall at the Ordnance Survey Office, Phoenix Park, Dublin, was 1,440 inches on 18 days. This amount includes a measurement of 345 inch on the 25th. The total amount of sunshine was 207.0 hours, the largest daily duration being 152 hours on the 7th.

At the Railway Hotel, Reeces, CONNEMARA, the rainfall was 5,888 inches on 17 days. The maximal falls for the month were 880 inch on the 4th and again on the 21st, 820 inch on the 12th, and 610 inch on the 13th. There were frequent heavy showers.

At Cuck, 3.55 inches of rain fell, or 1.11 inches over the average, the number of rainy days being 16, and the greatest day's rainfall being 91 inch on the 14th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 60.7°, being 0.3° below the average for July during the previous 5 years, the extremes being—highest, 74.2° on the 20th; lowest, 45.0° on the 7th. At Bourne-mouth the mean was 64.5°, the extremes being—highest, 86° on the 20th; lowest, 51° on the 3rd. These figures again confirm the statement that the summer heat on the south coast of England is excessive as compared with that of Kingstown. The mean daily range of temperature at Kingstown was 13°, and at Bourne-mouth 14.7°. The relative humidity was 75 per cent. The mean temperature of the sea at Sandycove bathing-place was 50.4°, being 2.5° below the

average for the month during the previous 6 years. The total rainfall was 0.67 inch on 14 days, being 1.27 inches below the average for July during 14 previous years (1873-83) and (1901-03), and the absolute lowest for the month during these 14 years, excepting July, 1878, which amounted only to 0.45 inch. The total rainfall at Bournemouth was 2.11 inches on 10 days. The total duration of bright sunshine was 2032 hours, as compared with 207 hours at the Ordnance Survey Office, Phoenix Park, 1283 hours at Valentia, 1544 hours at Birr, 1964 hours at Southport, and 2424 hours at Keshbourne.

AUGUST.—While changeable, showery and breezy, August, 1904, deserves to be described as a favorable month. It began and closed with spells of warmth, whereas a distinctly cold period set in during the evening of the 15th, lasting until the morning of the 27th. Wednesday, the 3rd, was the warmest day of this year in Dublin—the range of temperature being from 61.7° to 77.7°, and the arithmetical mean being 69.7°. On the other hand, Wednesday, the 24th, was the coldest day of the month in Dublin, the diurnal range being from 44.6° to 62.1°, and the mean temperature falling to 53.4°. During the first five days torrid heat was felt in London, the maxima being 79°, 85°, 82°, 91°, and 78°, respectively.

The thermometer rose to or above 70° in the shade on nine days in Dublin—and on the 3rd the maximum was 77.7°. The duration of bright sunshine was estimated at 1885 hours, or a daily average of 60 hours, compared with a twenty years' average of 1627 hours, or 36 per cent. of its possible duration, recorded at the Ordnance Survey Office, Phoenix Park.

In Dublin the arithmetical mean temperature (60.1°) was slightly above the average (59.7°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 58.2°. In the forty years ending with 1904, August was coldest in 1881 (M. T. = 57.6°), and warmest in 1899 (M. T. = 63.4°).

The mean height of the barometer was 29.971 inches, or 0.074 inch above the corrected average value for August—namely, 29.897 inches. The mercury rose to 30.250 inches at 9 a.m. of the 31st, and fell to 29.643 inches at 9 p.m. of the 14th. The observed range of atmospheric pressure was, therefore, 0.606 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 58.2°. It was 1.7° below the value for July, 1904. Using the formula, Mean Temp. = $\frac{M_{\text{m}} + (M_{\text{ax}} - M_{\text{m}}) \times .41}{1}$, the mean temperature was 59.6°, or 0.3° above the average mean temperature for August, calculated in the same way, in the thirty years, 1871-1900, inclusive (59.39°). The arithmetical mean of the maximal and minimal readings was 60.1°, compared with a thirty years' average of 59.7°. On the 3rd the thermometer in the screen rose to 77.7°—wind, S.S.W.; on the 24th the temperature fell to 44.6°—wind, N.N.W. The minimum on the grass was 41.2°, also on the 24th.

The rainfall was 2.803 inches, on 18 days. The average rainfall for August in the thirty-five years, 1866-1900, inclusive, was 3.040 inches, and the average number of rainy days was 17. The rainfall, therefore, was slightly below the average, while the rainy days were slightly above it. In 1900 the rainfall in August was very large—3.671 inches on 17 days, establishing a record for August in Dublin; in 1889, 5.747 inches were registered on 22 days. On the other hand, in 1884, only .777 inch was measured on 8 days. In 1903, 2.800 inches fell on 26 days.

High winds were noted on as many as 13 days, and attained the force of a gale on 4 days—the 6th, 14th, 15th and 31st. Temperature reached 70° in the screen on nine days, compared with 15 days in August, 1899, 6 in 1900, 7 in 1901, and only one day in both 1902 and 1903. Lightning was seen on the 4th, 27th and 30th. Thunder was heard on the 23rd, and a slight thunderstorm occurred on the 17th. A lunar halo was seen on the night of the 26th. Fog was prevalent on the 28th and 29th.

The rainfall in Dublin during the eight months ending August 31st amounted to 16.808 inches on 135 days, compared with 31.872 inches on 157 days in 1903, 18.456 inches on 133 days in 1902, 14.384 inches on 106 days in 1901, 25.480 inches on 146 days in 1900, 16.200 inches on 117 days in 1899, 16.516 inches on 126 days in 1898, 19.388 inches on 149 days in 1897, 14.464 inches on 120 days in 1896, 2.455 inches on 96 days during the same period in 1895, and a thirty-five years' average of 17.660 inches on 130 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29.969 inches, the range of atmospheric pressure being from 30.246 inches at 9 a.m. of the 8th to 29.646 inches at 9 p.m. of the 14th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 59.2°. The arithmetical mean of the daily maximal and minimal temperatures was 59.4°. The screened thermometers rose to 76.5° on the 3rd, and fell to 44.6° on the 20th. On this latter date the grass minimum was 40.2°, while on the 24th it was 40.1°. On the 3rd the black bulb in *caveau* rose to 136.2°. Rain fell on 17 days to the amount of 2.916 inches, the greatest fall in 24 hours being .914 inch on the 30th. The duration of bright sunshine, according to the Campbell-Stokes recorder was 183.75 hours, of which 11.75 occurred on the 14th. The mean daily sunshine was 59 hours. The mean temperature of the soil at a depth of one foot was 59.9° at 9 a.m. and 60.8° at 9 p.m.; at a depth of 4 feet, it was 57.9° at 9 a.m. and also at 9 p.m.

Dr. Arthur S. Goff reports that at Lymington, Dundrum, County Dublin, rain fell on 22 days, the total being 2.83 inches, and the heaviest rainfall in 24 hours being .95 inch on the 30th. The corresponding figures for 1901 were 3.11 inches on 16 days, for 1902, 2.73 inches on 18 days, and for 1903, 2.75 inches on 25 days. The mean shade temperature was 60.5°, the range being from 77° on the 3rd to 47° on the 24th. In August, 1901, the M. T. was 60.8°, in 1902, it was 58.7°, and in 1903, 58.6°.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 19 days to the amount of 2.735 inches, the greatest measurement in 24 hours being .700 inch on the 30th. The total amount of sunshine was 1870 hours, the most on one day being 111 hours on the 7th.

According to Mr. R. Cathcart Dobbs, J.P., at Knockdoon, Greystones, Co. Wicklow, the rainfall was 2875 inches on 30 days, compared with 2870 inches on 27 days in 1903, 3550 inches on 15 days in 1902, 3425 inches on 15 days in 1901, 5295 inches on 16 days in 1900, 2340 inches on 11 days in 1899, 5185 inches on 18 days in 1898, 6195 inches on 27 days in 1897, and 1245 inches on 14 days in 1896. The heaviest fall in 24 hours was 1030 inches on the 21st. The total fall since January 1st amounts to 18577 inches on 139 days, compared with 33100 inches on 134 days in 1903, 23161 inches on 111 days in 1902, 19685 inches on 100 days in 1901, 29320 inches on 136 days in 1900, 25630 inches on 130 days in 1899, 17530 inches on 112 days in 1898, 35945 inches on 143 days in 1897, and only 14327 inches on 91 days in 1896.

At Cork the rainfall measured by Mr. W. Miller was 297 inches, or 052 inch under the average, the maximal fall in 24 hours being 091 inch on the 3rd. There were 17 rainy days.

Mr. A. A. Smith reports that at the Railway Hotel, Recan, Connemara, Co. Galway, the rainfall was 7504 inches on 35 days, 1270 inches falling on the 3rd and 1180 inches on the 5th.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent of Health, Kingstown, reports that the mean temperature at that health resort was 59°6', being 0° below the average for the month during the previous 6 years, the extremes being—highest, 72°3' on the 3rd; lowest 46° on the 20th. At Bournemouth the mean was 61°9', the extremes being—highest, 76° on the 4th and 29th; lowest 46° on the 25th. The mean daily range of temperature was 13° at Kingstown, and at Bournemouth 15°9'. The relative humidity at Kingstown was 74 per cent. The mean temperature of the sea at Sandycove bathing-place was 57°, being 2° below the average for August during the previous 6 years. The rainfall was 253 inches on 16 days, being 072 inches below the average for the month during the previous 14 years; 089 inch fell between 9 p.m. on the 30th and 9 a.m. on the 31st. The rainfall at Bournemouth was 307 inches on 15 days, and on the 5th 056 inch fell. The total duration of bright sunshine was 1783 hours, as compared with 1890 hours at the Ordnance Survey Office, Phoenix Park, 1638 hours at Valentia, 1457 hours at Parsonstown, 1867 hours at Southport, and 2116 hours at Eastbourne.

SEPTEMBER.—A favourable month, although rain fell frequently up to the 15th—very heavily in Dublin on the 12th, when the fall was 1285 inches at Leeson Park, 1197 inches at 40 Fitzwilliam-square, W., 1068 inches in Trinity College, 880 inch at the Royal Botanic Gardens, Glasnevin, and only 520 inch at the Ordnance Survey Office, Phoenix Park. After the rainy period an anticyclone of much staying power and some intensity caused beautiful weather—fair and bright days, and calm cool nights—from the 16th to the 26th. A bank of cloud which formed over the city about noon of the 27th gave a local rainfall of 254 inch in 1½ hours at Fitzwilliam-square, and of 332 inch in Trinity College. The duration of bright sunshine was estimated at 161 hours, or 427 per cent. of the possible duration, equal to a daily mean of 3¼ hours, compared with a twenty years' mean of 1874 hours recorded at the Ordnance Survey Office, Phoenix Park, or 35 per cent. of the possible duration. At night also the "harvest moon" was much in evidence, and very perfect lunar rainbows were seen on the 4th and 9th.

The most prevalent winds were E.S.E., S.S.E., and S.W.

In Dublin the arithmetical mean temperature (56°8') was above the average (55°9'); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 55°3'. In the forty years ending with 1904, September was coldest in 1856 and 1892 (M. T. = 53°0°), and warmest in 1865 (M. T. = 61¼°) and 1895 (M. T. = 60°2'). In 1903 the M. T. was 56°0°.

The mean height of the barometer was 30.003 inches, or 0003 inch above the corrected average value for September—namely, 29.910 inches. The mercury rose to 30.308 inches at 9 p.m. of the 32nd, having fallen to 29.576 inches at 9 p.m. of the 5th. The observed range of atmospheric pressure was, therefore, 732 inch.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 55°3', or 2° below the value for August, 1904. Using the formula, $\text{Mean Temp.} = \frac{\text{Min.} + (\text{Max.} - \text{Min.}) \times 476}{5}$, the mean temperature was 56°5', or 0° above the average mean temperature for September calculated in the same way, in the thirty years, 1871-1900, inclusive (56°5'). The arithmetical mean of the maximal and minimal readings was 56°8', compared with a thirty years' average of 56°9°. On the 5th the thermometer in the screen rose to 71°6°—wind, S.E.; on the 29th the temperature fell to 41.1°—wind calm. The minimum on the grass was 35°2' on the 28th.

The rainfall was 2339 inches on 17 days. The average rainfall for September in the thirty-five years, 1866-1900, inclusive, was 2399 inches, and the average number of rainy days was 15. In 1871 the rainfall was very large—4948 inches on, however, only 13 days; in 1896 no less than 5073 inches fell on 33 days, establishing a record rainfall for September. On the other hand, in 1865, only 056 inch was measured on but 3 days. In 1903, 8397 inches fell on 17 days.

High winds were noted on 11 days, but attained the force of a gale on the 12th alone. The atmosphere was foggy on the 10th, 14th, 20th, 27th and 28th. Solar halos were observed on the 11th and 29th.

The rainfall in Dublin during the nine months ending September 30th amounted to 19147 inches on 152 days, compared with 29269 inches on 174 days in the same period of 1903, 21425 inches on 149 days in 1902, 18670 inches on 124 days in 1901, 24794 inches on 156 days in 1900, 20348 inches on 135 days in 1899, only 10466 inches on 112 days in 1897, and a thirty-five years' average of 19630 inches on 145 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30.004 inches, the range of atmospheric pressure being from 29.790 inches at 9 p.m. of the 5th and also at 9 a.m. of the 14th to 30.312 inches at 9 p.m. of the 23rd. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 56°3°. The arithmetical mean of the daily maximal and minimal temperatures was 56°6°. The screened thermometers rose to 60°7°

on the 5th, and fell to 41° on the 28th. On this latter date the grass minimum was 33°. On the 5th the black hail or sleet rose to 19° 4'. Rain fell on 16 days to the amount of 2345 inches, the greatest fall in 24 hours being 1'088 inches on the 13th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 159 hours, of which 104 occurred on the 3rd and the same number on the 20th.

Mr. R. Cathcart Dobbs, J.P., reports that at Knockdolian, Greystones, Co. Wicklow, the rainfall was 3880 inches on 12 days, compared with 3950 inches on 30 days in 1903, 3396 inches on 12 days in 1902, 5430 inches on 19 days in 1901, and only 636 inch on but 4 days in 1900. The heaviest fall in 24 hours was 680 inch on the 12th. At Knockdolian the rainfall since January 1st, 1904, has been 31457 inches on 141 days, compared with 27050 inches on 154 days in 1903, 27156 inches on 123 days in 1902, 25106 inches on 119 days in 1901, 30921 inches on 140 days in 1900, 28440 inches on 139 days in 1899, and 19488 inches on 124 days in 1898.

Mr. Robert O'Brien Furlong, C.B., returns the rainfall at Clonsilla, Kildare, in August, 1904, at 285 inches on 16 days, the largest measurement in 24 hours being 88 inch on the 30th. The average precipitation in August at this station in the nineteen years, 1885-1903, was 3146 inches on 17 days. Up to August 31st the rainfall in 1904 at Clonsilla amounted to 1554 inches on 126 days. In September rain fell on 18 days to the total quantity of 237 inches, of which 89 inch was measured on the 12th. The average rainfall in September for the nineteen years, 1885-1903, was 2142 inches on 132 days. Since January 1st, 1904, the total rainfall at Clonsilla amounts to 1881 inches on 144 days.

Dr. Arthur S. Goff returns the rainfall at Lynton, Dundrum, Co. Dublin, at 294 inches on 19 days, compared with 503 inches on 18 days in 1901, 409 inches on 19 days in 1902, and 432 inches on 21 days in 1903. The greatest daily fall was 110 inches on the 19th. The mean temperature in the shade was 56° 2', compared with 55° 3' in September, 1903. The screened thermometers rose to 62° on the 5th, and fell to 43° on the 28th.

Mr. Wm. Muller states that in the City of Cork the rainfall was 588 inches on 14 days, or 118 inches above the average for September. The rainfall was greatest on the 7th, when 0'85 inch was measured. In the 9 months ended September 30th, the rainfall was 2975 inches, or 336 inches above the average, but 1089 inches less than in the corresponding period of 1903.

Dr. B. H. Steele reports that at the Royal National Hospital, Newcastle, Co. Wicklow, the rainfall in August was 2623 inches on 19 days, compared with 3171 inches on 24 days in 1903, 4084 inches on 14 days in August, 1902, 3666 inches on 15 days in 1901, 3988 inches on 13 days in 1900, 1277 inches on 13 days in 1899, 3803 inches on 16 days in 1898, and 4526 inches on 20 days in 1897. The heaviest fall was 802 inch on the 21st. From January 1st to August 31st, 1904, the rainfall at this Normal Climatological Station was 31871 inches on 149 days, compared with 27022 inches on 154 days in the first 8 months of 1903, 22358 inches on 123 days in 1902, 16,646 inches on 100 days in 1901, 24,144 inches on 190 days in 1900, 25748 inches on 117 days in 1899, and 20101 inches on 110 days in 1898. The maximal temperature in the shade was 70° 6' on the 27th, and the minimal temperature was 44° 5' on the 19th.

In September the rainfall at the Royal National Hospital amounted to 5825 inches on 15 days, 624 inch falling on the 7th. The maximal temperature in the shade was 63° 2' on the 2nd and 7th, the minimum was 42° 0' on the 22nd. Since January 1st, rain has fallen on 155 days to the amount of 25624 inches.

The rainfall of September at the Ordnance Survey Office, Phoenix Park, Dublin, was only 1538 inches on 16 days, the largest catchment in 24 hours being 330 inch on the 13th, when more than double that amount fell in the city. The total duration of bright sunshine was 166 hours, the most in one day being 12 hours on the 3rd.

Mr. A. A. Smith reports that at the Railway Hotel, Recess, Co. Galway, 5456 inches of rain fell on 15 days. The month commenced with very wild and wet weather, half an inch of rain and upwards being measured on 5 occasions during the month. Lovely weather prevailed from the 19th to the 28th inclusive, but on the 29th the maximal daily rainfall of the month occurred—namely, 1'89 inch.

Dr. J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kinshtown, reports that the mean temperature at that health resort was 56° 8', being 1° below the average for the month during the previous 6 years, the extremes being—highest, 66° 7', on the 19th; lowest, 43° 0', on the 29th. At Bournemouth the mean was 57° 3', the extremes being—highest, 70° on the 6th and 8th; lowest, 43° on the 21st. The mean daily range of temperature was 11° 9', at Bournemouth it was 10° 7'. The mean temperature of the sea at Sandycove bathing-place was 55° 5', being 2° below the average for the month during the past 6 years, and it is remarkable that it has remained below this average since November last. The relative humidity was 77 per cent. The rainfall was 183 inches on 18 days, being 0·83 inch below the average for September during 14 previous years (1875-88 and 1901-03). The greatest precipitation was on the 12th, when 0·81 inch was recorded. At Bournemouth the rainfall was 185 inches on 14 days. The total duration of bright sunshine was 1523 hours, as compared with 166 hours at Phoenix Park, 1063 hours at Valentia, 1219 hours at Parsonstown, 165 hours at Southport, and 1678 hours at Bournemouth.

OCTOBER.—October, 1904, may be described as a dull yet fine and mild month, with a high barometric pressure, a deficiency of bright sunshine, a damp atmosphere, yet a singularly scanty rainfall. The only very serious and deep depressions which crossed North-western Europe were observed on the 6th, when the barometer fell to 28·80 inches or lower between Scotland and Norway, and on the 17th, on the morning of which day the low barometer reading of 28·90 inches was reported from the Shetlands. Fresh to strong S.W. gales accompanied both depressions. There was very little cold weather, but on the 3rd, 19th, and 27th sharp depressions of temperature of a transitory kind occurred in connection with anti-cyclonic conditions of barometric pressure. On the 27th the thermometer rose in a few hours from 34·3° to 55·5°.

In Dublin the arithmetical mean temperature (51.6°) was very decidedly above the average (49.4°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 50.6°. In the forty years ending with 1904, October was coldest in 1892 (M. T. = 44.8°) and in 1898 (M. T. = 45.0°). It was warmest in 1878 (M. T. = 53.1°). The M. T. in 1896 was 52.6°. In 1903 it was 51.2°.

The mean height of the barometer was 30.076 inches, or 0.236 inch above the corrected average value for October—namely, 29.840 inches—and as much as 0.71 inch above the low mean pressure of October, 1906. The mercury rose to 30.483 inches at 9 p.m. of the 12th, having fallen to 29.384 inches at 6 p.m. of the 5th. The observed range of atmospheric pressure was, therefore, 1.121 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 50.6°, or 4.7° below the value for September, 1904. The arithmetical mean of the maximal and minimal readings was 51.8°, compared with a thirty years' average of 49.4°. Using the formula, $Mean\ Temp. = Min. + (Max - Min) \times .483$, the mean temperature was 51.4°, or 2.2° above the average mean temperature for October, calculated in the same way, in thirty years, 1871-1900, inclusive (49.2°). On the 21st the thermometer in the screen rose to 64.0°—wind, S. to S.W.; on the 27th the temperature fell to 34.3°—wind, N.E. The minimum on the grass was 32.8° on the 18th and also on the 27th.

The rainfall was only .454 inch, distributed over 11 days, both the rainfall and the rainy days were much below the average. The average rainfall for October in the thirty-five years, 1865-1900, inclusive, was 2.940 inches, and the average number of rainy days was 18. In 1880 the rainfall in October was very large—7.358 inches on 15 days. In 1875, also, 7.049 inches fell on 26 days. On the other hand, in 1899 only .582 inch fell on but 11 days; in 1894, only .834 inch on but 14 days; and in 1898 only .850 inch on 15 days. In 1903 the October rainfall was 2.613 inches on 22 days. It will be seen from the above figures that the scanty rainfall of October, 1904, establishes a record for this month in Dublin.

High winds were noted on 9 days, but attained the force of a gale on only two occasions—the 5th and 17th. The atmosphere was more or less foggy in Dublin on the 10th, 13th, 19th, 26th, 28th, 27th, and 28th. The duration of bright sunshine was estimated at only 95.25 hours, compared with 127.25 hours in 1900, 115.25 hours in 1901, only 84.25 hours in 1902, and 132.75 hours in 1903. A solar halo was seen on the 26th.

The rainfall in Dublin during the ten months ending October 31st amounted to 19.601 inches on 163 days, compared with 12.366 inches on 123 days during the same period in 1887 (the dry year), 27.863 inches on 177 days in 1900, 20.496 inches on 145 days in 1901, 24.481 inches on 172 days in 1902, 27.882 inches on 196 days in 1903, and a thirty-five years' average of 22.820 inches on 163 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30.077 inches, the range of atmospheric pressure being from 30.483 inches at 9 p.m. of the 12th to 29.413 inches at 9 p.m. of the 5th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 51.5°. The arithmetical mean of the daily maximal and minimal temperatures was 51.7°. The screened thermometers rose to 64.8° on the 21st, and fell to 34.3° on the 27th. On this latter date the grass minimum was 27.5°, while on the 13th it was 27.4°. On the 1st the black bulb in screen rose to 110.9°. Rain fell on only 7 days to the amount of .416 inch, the greatest fall in 24 hours being .300 inch on the 16th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 84.25 hours, of which 9 hours occurred on the 1st. The mean daily sunshine was 2.7 hours. The mean temperature of the soil at a depth of one foot was 51.6° at 9 a.m. and 51.8° at 9 p.m.; at a depth of 4 feet, it was 58.2° at 9 a.m. and 53.1° at 9 p.m.

Mr. R. Cathcart Dobbs, J.P., reports that the rainfall in October at Knockdohan, Greystones, Co. Wicklow, amounted to only .630 inch on 10 days. Of this quantity, .190 inch fell on the 16th. From January 1st, 1904, up to October 31st, rain fell at Knockdohan on 151 days to the total amount of 22.087 inches. In 1898 the rainfall in the corresponding ten months was 17.801 inches on 133 days; in 1897, 32.730 inches on 171 days; in 1898, 24.177 inches on 140 days; in 1899, 30.000 inches on 150 days; in 1900, 35.311 inches on 155 days; in 1901, 28.030 inches on 135 days; in 1902, 31.811 inches on 140 days; and in 1903, 30.965 inches on 133 days.

At Clonevin, Kildiney, Co. Dublin, the rainfall in October was only .39 inch on 12 days, compared with .710 inch on 14 days in 1893, 6.460 inches on 17 days in 1894, 2.760 inches on 20 days in 1902, 3.820 inches on 26 days in 1903, and a nineteen years' average (1885-1903) of 2.665 inches on 168 days. On the 16th .10 inch fell. Since January 1st, 1904, 19.100 inches of rain have fallen at this station on 156 days. Mr. Robert O'B. Furlong, C.E., writes—"This (.39 inch) is the lowest rainfall recorded for October since 1883. During the 19 years, more rain fell in October than in any other month, except August. The figures being—August, 52.78 inches; October, 50.64 inches. The highest records for October were—1885, 5.88 inches on 25 days; 1894, 6.46 inches (*Mean*) on 15 days; 1896, 5.23 inches on 20 days; and the lowest, 1820, .45 inch on 11 days; 1893, .71 inch on 14 days."

Dr. B. H. Steade reports—At the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was .868 inch on 13 days, compared with 5.175 inches on 13 days in 1897, 4.385 inches on 17 days in 1898, 1.484 inches on 11 days in 1899, 8.551 inches on 14 days in 1900, 3.350 inches on 21 days in 1901, 3.577 inches on 18 days in 1902, and 4.155 inches on 26 days in 1903. The heaviest fall in 24 hours was .370 inch on the 16th. The highest temperature in the screen was 63.2° on the 18th, the lowest was 37.0° on the 25th. At the Second Order Station the rainfall from January 1st to October 31st, inclusive, amounted to 26.562 inches on 168 days, compared with 29.679 inches on 139 days in the corresponding ten months of 1898, 27.643 inches on 140 days in 1899, 28.599 inches on 150 days in 1900, 24.953 inches on 142 days in 1901, 29.742 inches on 154 days in 1902, and 35.316 inches on 201 days in 1903.

Dr. Arthur S. Goff reports that at Lynton, Dundrum, Co. Dublin, rain fell on 9 days to the amount of .62 inch, compared with 2.40 inches on 21 days in 1901, 3.45 inches on 24 days in 1902, and 3.38 inches on 26 days in 1903. The greatest measurement in 24 hours was .21 inch on the 16th. The mean temperature in the shade was 51.6°, the range being from 62° on the 18th to 37° on the 27th.

The mean temperature of October, 1901, was 50°; of October, 1902, 50·9°; and of October, 1903, 50·8°.

Mr. William Miller states that in the City of Cork there were 30 days with rain during the month; total fall, 3·06 inches, which was 0·24 inch under the average. The greatest day's rain was that of the 22nd—0·73 inch. The rainfall of the past ten months was 32·81 inches, which was 3·12 inches over the average for the same period, but less than the corresponding period of last year by 18·65 inches.

At the Ordnance Survey Office, Phoenix Park, Dublin, the October rainfall was 660 inch on 16 days, compared with 2338 inches on 24 days in 1903. The heaviest fall in 24 hours was 1·30 inch on the 16th. At the Royal Botanic Gardens, Glasnevin, rain fell on 10 days to the amount of 4·89 inch, the greatest daily fall being 3·30 inch on the 16th.

Mr. A. A. Smith returns the rainfall at the Railway Hotel, Rocco, Connemara, Co. Galway, as 5750 inches on 14 days. Of this large precipitation, 2170 inches were recorded on the 16th and 1310 inches on the 27th. The observer reports that the weather of October was exceedingly mild, with many hours of bright sunshine.

Dr. J. Byrne Power, F.R. Med. Soc., D.P.H., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 52·8°, being 0·7° above the average for the month during the previous 6 years, the extremes being—highest, 64·2°, on the 18th; lowest, 38·5°, on the 19th. At Bournemouth the mean was 52·4°, the extremes being—highest, 65°, on the 19th; lowest, 40°, on the 29th. The mean daily range of temperature was 9·7°, and at Bournemouth, 11·7°. The mean temperature of the sea at Sandycove bathing-place was 54·5°, being 0·4° below the average for the month during the previous 6 years. It is remarkable that the mean temperature of the sea is so close to the average this month, it having been below the average for each and every month since November, 1903, the differences varying from 1·8° to 3·1°. The relative humidity was 82 per cent., being 3 per cent. higher than the average for the month during the previous 3 years. The rainfall measured only 0·19 inch on 9 days, being 2·81 inches below the average for the month during 14 previous years (1873-83) and (1901-03) the lowest for any month during these years, the next lowest being 0·42 inch for January, 1876. At Bournemouth the rainfall was 2·58 inches on 15 days, and at Dungeness, one of the driest stations on the south coast of England, it was 1·70 inches on 15 days. The total duration of bright sunshine was 902 hours, as compared with 959 hours at Phoenix Park, 972 hours at Valentia, 761 hours at Parsonstown, 1024 hours at Southport, and 731 hours at Eastbourne.

November.—Like November, 1903, this month was characterised by a high barometer and a normal temperature. Unlike November, 1903, the rainfall of November, 1904, was much below the average. It is also to be noted that, although the mean temperature of the whole month was just the average, very mild and open weather prevailed until the 19th, when an abrupt change to very wintery conditions took place, the weather becoming cold and frosty, with snow and hail at times, and so continuing till the 28th. The sudden plunge into winter was brought about by the passage southwards of an atmospheric depression which approached the N.W. coasts of the British Isles on Monday, the 21st, travelling thence to Central Europe and increasing all the time in energy. It left the greater portion of Great Britain and Ireland with a deep covering of snow, over which the thermometer fell to 8° at Cambridge on the early morning of the 24th.

The duration of bright sunshine was estimated at 5075 hours, or a daily average of only 169 hours.

In Dublin the arithmetical mean temperature (45·3°) was almost the average (45·4°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 44·1°. In the forty years ending with 1904, November was coldest in 1878 (M. T. = 38·2°), and in 1870 (M. T. = 42·3°); warmest in 1859 (M. T. = 50·7°), and in 1881 (M. T. = 50·3°). In 1903 the M. T. was 49·6°.

The mean height of the barometer was 30·058 inches, or 0·008 inch above the corrected average value for November—namely, 29·860 inches. The mercury rose to 30·527 inches at 7 p.m. of the 16th, and fell to 29·449 inches at 9 a.m. of the 7th. The observed range of atmospheric pressure was, therefore, 1·078 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·1°, or 6·5° below the value for October, 1904. The arithmetical mean of the maximal and minimal readings was 45·3°, compared with a thirty years' (1871-1900) average of 45·4°. On the 9th the thermometer in the screen rose to 59·0°—wind, W. by S.; on the 22nd the temperature fell to 27·3°—wind, W. N. W. The minimum on the grass was 23·8° on the 22nd.

The rainfall was 1977 inches on 9 days; the rainfall and the rainy days were much below the average.—The average rainfall for November in the thirty-five years, 1869-1900, inclusive, was 2·560 inches, and the average number of rainy days was 17·0. In 1885, 6·459 inches fell on 26 days. On the other hand, the rainfall in 1896 was only 564 inch on 9 days. In 1903 the rainfall was 2·133 inches on 16 days.

High winds were noted on only 4 days, and attained the force of a gale on two days—the 8th and 9th. The atmosphere was more or less foggy in Dublin on the 7th, 12th, 13th, 16th, 17th, 24th and 29th. A solar halo was seen on the 6th. Lunar halos appeared on the 19th and 21st. Sleet or snow fell on the 21st, 22nd, 23rd, and 24th; hail on the 21st, 24th and 25th.

The rainfall in Dublin during the eleven months ending November 30th amounted to 20·678 inches on 172 days, compared with 15·378 inches on 141 days during the same period to 1887, 24·450 inches on 163 days in 1899, 31·738 inches on 186 days in 1900, 24·096 inches on 156 days in 1901, 27·812 inches on 130 days in 1902, 30·015 inches on 212 days in the same period of 1903, and a thirty-five years' average of 25·880 inches on 180 days.

At the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 30·066 inches, the range of atmospheric pressure being from 30·521 inches at 9 a.m. of the 16th to 29·443 inches at 9 a.m. of the 7th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 44·6°. The arithmetical mean of the daily maximal and minimal temperatures was 45·3°. The screened thermometers rose to 58·6° on the 9th, and fell to 27·0° on the 22nd. On this latter date the grass minimum was 21·0° while on the 25th it was 20·9°.

On the 5th the black bulb in *vacuo* rose to 32° F. Rain fell on 9 days to the amount of 1.105 inches, the greatest fall in 24 hours being 3.90 inch on the 6th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 352 hours, of which 57 hours occurred on the 12th. The mean daily sunshine was 12 hours. The mean temperature of the soil at a depth of one foot was 46.0° at 9 a.m. and 46.1° at 9 p.m.; at a depth of 4 feet, it was 50.0° at 9 a.m. and 49.9° at 9 p.m.

At Glencovin, Killiney, Co. Dublin, Mr. Robert O'B. Furlong, C.B., states that 129 inches of rain fell on 10 days, compared with a nineteen years' (1885-1903) average of 309 inches on 162 days. The maximal fall in 24 hours was 4.1 inch on the 6th. Since January 1, 1904, 29,390 inches of rain have fallen at this station on 166 days. The corresponding figures for 1898 were 26,777 inches on 173 days; for 1899, 27,98 inches on 162 days; for 1900, 33,47 inches on 188 days; for 1901, 26,10 inches on 161 days; for 1902, 30.18 inches on 178 days; and for 1903, 30,05 inches on 203 days. Snow, sleet, or hail fell on the 21st, 23rd and 24th.

Mr. R. Cathcart Doherty, J.P., reports that at Knockdoherty, Greystones, Co. Wicklow, the rainfall was 1,485 inches on 9 days. Of the total quantity 610 inch fell on the 6th, and 425 inch on the 25th. From January 1st, 1904, up to November 30th, rain fell at Greystones on 160 days to the amount of 23,573 inches. The corresponding figures for 1898 were 28,786 inches on 156 days; for 1899, 32,670 inches on 162 days; for 1900, 39,296 inches on 173 days; for 1901, 31,435 inches on 147 days; for 1902, 37,101 inches on 157 days, and for 1903, 33,070 inches on 183 days.

Dr. Arthur S. Goff reports that at Lynton, Dendrum, Co. Dublin, rain fell on 11 days to the amount of 1.26 inches, the greatest measurement in 24 hours being .40 inch on the 6th. In November, 1903, the rainfall was 3.35 inches on 8 days; in 1902, it was 4.61 inches on 17 days; in 1903, 1.23 inches on 14 days. The mean temperature in the shade was 44° F., the range being from 57° on the 8th and 9th to 27° on the 22nd. Snow fell on the 30th and 31st; snow and hail showers on the 22nd, and hail showers on the 23rd.

Dr. B. H. Steeds reports that at the Royal National Hospital for Consumption, Newcastle, Co. Wicklow, the rainfall was 1,841 inches on 10 days, compared with 5,724 inches on 18 days in 1900, 3,196 inches on 13 days in 1901, 5,551 inches on 13 days in 1902, and 2,571 inches on 13 days in 1903. The maximal fall in 24 hours was 5.02 inch on the 6th. Since January 1, 1904, the rainfall at Newcastle amounted to 27,903 inches on 178 days. The corresponding figures for 1899 were 30,332 inches on 152 days; for 1900, 34,323 inches on 168 days; for 1901, 28,149 inches on 135 days; for 1902, 39,283 inches on 172 days, and for 1903, 38,087 inches on 214 days. On the 3rd the screened thermometers at the Royal National Hospital rose to 58.2°, on the 24th they fell to 27.3°.

At the Ordnance Survey Office, Phoenix Park, Dublin, rain fell on 14 days to the amount of 1,416 inches, the largest measurement in 24 hours being 5.65 inch on the 6th. The total amount of sunshine was 562 hours, the most in one day being 67 hours on the 12th.

At the Railway Hotel, Renss, Connemara, Co. Galway, rain fell on 15 days to the amount of 5,175 inches, 1,350 inches being measured on the 6th. Snow and hail fell on the 21st, and a heavy snowstorm prevailed on the 22nd.

In Cork the rainfall was only 1.65 inches, or 2.41 inches below the average for November. There were, however, 14 rainy days. The heaviest fall in 24 hours was 5.6 inch on the 6th. Up to November 30th, the rainfall of 1904 amounted to 34,46 inches.

Dr. J. Byrnes Power, F.R. Met. Soc., D.P.H., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 46.3°, being 1.3° below the average for the month during the previous 6 years. The extremes were—highest, 59.2°, on the 15th; lowest, 29°, on the 23rd. At Bournemouth the mean was 44.1°, the extremes being—highest, 53°, on the 10th and 12th; lowest, 28°, on the 26th. The mean daily range of temperature was 5.7°; at Bournemouth it was 11.1°. A frost set in on the 22nd, which, although not severe, was very unusual at Kingstown so early in the season. Between the 22nd and the 27th the thermometer fell to 32° on 5 days, during which days the mean temperature was 35.9°, the absolute lowest being 29°. At Bournemouth the thermometer fell to 32° on 8 consecutive days, the mean temperature for these days being 34.0°, and the absolute lowest, 28°. The mean temperature of the sea at Sandycove bathing-place was 46.2°, being 1° below the average for the month during the previous 6 years. The relative humidity was 82 per cent., being 2 per cent. above the average for the month during the previous 6 years. The rainfall amounted to 1.80 inches on 8 days, being 1.41 inches below the average for the month during 14 previous years (1873-83 and 1901-03). At Bournemouth the rainfall was 1.19 inches on 9 days. The duration of bright sunshine was 54.9 hours, as compared with 56.2 hours at the Ordnance Survey Office, Phoenix Park, 34.3 hours at Valentia, 42.0 hours at Farnborough, 48.0 hours at Southampton, and 71.0 hours at Eastbourne.

December.—An open, dull month, with much gloom and fog after the 18th. Gales occurred early in the month—on the 4th, 8th, and 9th, and not again until the close—on the 29th and 30th. The first stormy period was ushered in by unusual warmth, the mean temperature of Sunday, the 4th, being 54.1°, or about 1.5° above the average for the time of year. The storm of the 29th-30th was caused by a deep depression, which passed rapidly south-eastwards from the N. of Scotland to Central Europe. It brought a sudden and extreme fall of temperature to Scandinavia and Germany. An anticyclonic period from the 18th to the 24th caused dense fogs and frost in England, while the weather remained open over the greater part of Ireland and Scotland. In the City of Dublin the estimated duration of bright sunshine was 50.25 hours, compared with 53.25 hours in December, 1902, and 67.25 hours in 1903—the daily average being 1.8 hours against 1.72 hours in 1902, and 2.17 hours in 1903.

In Dublin the arithmetical mean temperature (45.7°) was 2.2° above the average (43.5°); the mean dry-bulb readings at 9 a.m. and 9 p.m. were 42.9°. In the forty years ending with 1904, December was coldest in 1873 (M. T. = 32.8°), and in 1874 (M. T. = 36.8°); warmest in 1898 (M. T. = 47.6°), and in 1900 (M. T. = 47.1°).

The mean height of the barometer was 29.853 inches, or 9616 inch below the corrected average value for December—namely, 29.875 inches. The mercury rose to 30.550 inches at 9 p.m. of the 18th, and fell to 28.900 inches at 4 a.m. of the 13th. The observed range of atmospheric pressure was, therefore, 1.650 inches.

The mean temperature deduced from daily readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 42.9°, or only 1.2° below the value for November, 1904. Using the formula, *Mean Temp. = Min. + (Max.—Min.) × .52*, the value was 47.0° or 2.1° above the average mean temperature for December, calculated in the same way in the thirty years, 1871-1900, inclusive (44.9°). The arithmetical mean of the maximal and minimal readings was 43.9°, compared with a thirty years' average of 41.7°. On the 4th the thermometer in the screen rose to 59.0°—wind, S.W.; on the 22nd the temperature fell to 36.3°—wind, calm. The minimum on the grass was 25.8° on the 8th, and also on the 10th and 11th. There was frost in the screen on 5 days, and 13 nights of frost on the grass were recorded.

The rainfall was 1.802 inches, distributed over 17 days. The average rainfall for December in the thirty-five years, 1866-1900, was 2.830 inches, and the average number of rainy days was 18. The rainfall, therefore, and also the rainy days, were below the average. In 1876 the rainfall in December was very large—7.566 inches on 22 days. In 1888 (which was otherwise a fine and dry year), 4.748 inches fell on as many as 27 days. On the other hand, in 1897, only .771 inch was measured on 13 days; in 1889 only .745 inch on 10 days; in 1892, only .795 inch on 10 days; and in 1871, only .797 inch on 15 days. In 1903, 1.886 inches of rain fell on 16 days.

High winds were noted on 12 days, and attained the force of a gale on five occasions—the 4th, 5th, 9th, 29th and 30th. The atmosphere was more or less foggy in Dublin on the 8th, 13th, 18th, 19th, 21st, 22nd, 23rd, 24th, 26th, 27th and 28th. Snow or sleet fell on the 8th and 12th. Lightning was seen on the 18th. A solar halo was seen on the 18th, a lunar halo on the 18th, and lunar coronæ appeared on the 19th and 20th.

The rainfall in Dublin during 1904 amounted to 27.180 inches on 189 days, compared with 31.601 inches on 228 days in 1903, 29.375 inches on 208 days in 1902, 26.075 inches on 179 days in 1901, 34.338 inches on 216 days in 1900, 27.787 inches on 186 days in 1899, 27.948 inches on 194 days in 1898, 29.344 inches on 211 days in 1897, 28.901 inches on 194 days in 1896, 31.542 inches on 194 days in 1895, 29.261 inches on 209 days in 1894, only 20.498 inches on 174 days in 1893, only 16.601 inches on 160 days in 1887, and a thirty-five years' average of 27.770 inches on 196 days.

Mr. Arthur Robert Moore, B.A., reports that at the Normal Climatological Station in Trinity College, Dublin, the mean height of the barometer was 29.860 inches, the range of atmospheric pressure being from 30.550 inches at 9 p.m. of the 18th to 28.945 inches at 9 a.m. of the 19th. The mean value of the readings of the dry-bulb thermometer at 9 a.m. and 9 p.m. was 43.5°. The arithmetical mean of the daily maximal and minimal temperatures was 44.0°. The screened thermometers rose to 59.0° on the 4th, and fell to 29.0° on the 22nd. On this latter date the grass minimum was 23.9°, while on the 8th it was 19.8°. On the 1st the black bulb in screen rose to 60.2°. Rain fell on 16 days to the amount of 1.434 inches, the greatest fall in 24 hours being .390 inch on the 9th. The duration of bright sunshine, according to the Campbell-Stokes recorder, was 33.3 hours, of which 4.8 hours occurred on the 6th, and again on the 10th. The mean daily sunshine was 1.1 hours. The mean temperature of the soil at a depth of one foot was 43.1° at 9 a.m. and 42.3° at 9 p.m.; at a depth of 4 feet, it was 45.3° at 9 a.m. and also at 9 p.m.

Mr. R. Collicott Dobbs, J.P., reports that at Knockdohon, Greystones, Co. Wicklow, the rainfall in December was 1.880 inches on 15 days, compared with 2.830 inches on 18 days in 1903, and 2.920 inches on only 11 days in 1902. Of the total amount .600 inch fell on the 9th, and .820 inch on the 8th. From January 1st to December 31st, 1904, rain fell at Knockdohon on 175 days, to the total amount of 29.442 inches. The corresponding figures for 1895 were 35.135 inches on 174 days; 1896, 34.102 inches on 169 days; 1897, 42.885 inches on 210 days; 1898, 30.346 inches on 171 days; 1899, 28.690 inches on 182 days; 1900, 42.716 inches on 191 days; 1901, 34.750 inches on 166 days; 1902, 40.021 inches on 168 days, and 1903, 35.900 inches on 211 days.

Mr. Robert O'B. Furlong, O.B., returns the rainfall at Clonevin, Killiney, at 1.75 inches on 16 days. The maximal fall in 24 hours was .67 inch on the 9th. The average December rainfall of the 19 years (1885-1903) was 2.422 inches on 17.4 days. Snow and sleet fell on the 10th.

Dr. Arthur S. Goff reports that at Lynton, Dunderum, Co. Dublin, rain fell on 21 days to the amount of 2.14 inches, 75 inch being measured on the 9th. Temperature ranged from 57.0° on the 4th to 30.0° on the 22nd. The mean shade temperature was 43.1° Fahrenheit. In 1903, 2.21 inches of rain fell on 20 days.

At Wellesey-terrace, Cork, according to Mr. W. Miller, the December rainfall was 2.76 inches on 23 days, the measurement being 1.69 inches less than the average. The greatest daily rainfall was .78 inch on the 8th. The year's rainfall at this station was 37.22 inches on 214 days, the total being 1.28 inches under the average, and the rainy days being 17 in excess. The rainfall was 15.55 inches less than that of 1903, which had been the largest in Cork since 1872, when the measurement was 61.5 inches.

Mr. John Read, of Clarendon, Carrigrohane, Co. Dublin, reports that the rainfall at that place in December was 2.30 inches. The total rainfall for 1904 at Clarendon was 22.84 inches.

At the Railway Hotel, Recess, Connemara, Co. Galway, the rainfall measured by Mr. A. A. Smith was 5.717 inches on 20 days, compared with 9.413 inches on 26 days in December, 1899, 7.810 inches on 27 days in 1900, 7.467 inches on 20 days in 1901, 4.760 inches on 26 days in 1902, and 6.335 inches on 15 days in 1903. On the 16th .649 inch fell, on the 10th .630 inch, and on the 15th .620 inch.

At the Ordnance Survey Office, Phoenix Park, Dublin, 1.535 inches fell on 17 days, 329 inch being recorded on the 9th. The total amount of sunshine at this station was 56.8 hours, the most on one day being 4.7 hours on the 18th.

Dr. B. H. Steele reports that at the Royal National Hospital for Consumption, Newcastles, Co. Wicklow, rain fell on 13 days in December to the amount of 3.345 inches. The heaviest falls in 24

hours were 770 inch on the 9th and 487 inch on the 8th. The highest temperature was 55.3° on the 17th, the lowest was 30.6° on the 22nd. At this Normal Climatological Station the total rainfall during the year 1904 was 30.149 inches on 191 days. In 1903 it had been 41.830 inches on 251 days.

Dr J. Byrne Power, F.R. Met. Soc., Medical Superintendent Officer of Health, Kingstown, reports that the mean temperature at that health resort was 44.9°, being 0.7° above the average for the month during the previous 6 years, the extremes being—highest, 53.2° on the 16th and 17th; lowest, 29.5° on the 22nd. At Bournemouth the mean was 43.8°, the extremes being—highest, 55° on the 3th and 17th; lowest, 23.0° on the 22nd and 23rd. The mean daily range of temperature was 10°, and at Bournemouth it was also 10°. The mean temperature of the sea at Sandycove bathing-place was 48.7°, being 1.9° above the average for the month during the previous 6 years. The relative humidity was 83 per cent., being 3 per cent. below the average for the month during the previous 3 years. The rainfall at Kingstown was 1.48 inches on 14 days, being 0.83 inch below the average for the month during 14 previous years (1873-83 and 1901-03), at Bournemouth it was 3.79 inches on 21 days. The total duration of bright sunshine was 55.2 hours, as compared with 96.8 hours at the Ordnance Survey Office, Phoenix Park, 40.5 hours at Valentia, 40.4 hours at Parsonstown, 42.9 hours at Southport, and 39.4 hours at Eastbourne.

The total annual rainfall at Kingstown for 1904 amounted only to 30.01 inches, being 8.73 inches below the average for 14 previous years (1873-83 and 1901-03), and the absolute lowest of which there is a record in Kingstown. The greatest annual rainfall during these previous 14 years was that of 1880, amounting to 37.13 inches, and the lowest 23.31 inches in 1873. During 1904 the greatest monthly precipitation was 3.09 inches on 16 days in February, and the lowest that for October, amounting only to 0.19 inches on 9 days. This latter is the lowest quantity for any month on record, the next lowest being that of January, 1876, amounting to 0.42 inches. The total duration of bright sunshine at Kingstown during 1904 was 153.5 hours (54 hours above the average for the previous 3 years), as compared with 156.2 hours at the Ordnance Survey Office, Phoenix Park, 127.9 hours at Parsonstown, 128.1 hours at Valentia, 147.4 hours at Southport, and 175.4 hours at Eastbourne.

RAINFALL IN 1904.

At 40, Fitzwilliam-square, West, Dublin.

Rain Gauge.—Diameter of funnel, 8 in. Height of top—Above ground, 1 ft. 4 in., above sea level, 50 ft.

Month.	Total Depth.	Greatest Fall in 24 hours.	Number of Days on which 70 or more fell.	Month.	Total Depth.	Greatest Fall in 24 hours.	Number of Days on which 70 or more fell.
January.	2.553	.590	10	August.	2.040	.643	16

* Maximum.

The rainfall was 32.180 inches, or 5.590 inches less than the average annual measurement of the thirty-five years, 1866-1900, inclusive—viz., 37.770 inches.

It is to be remembered that the rainfall in 1887 was very exceptionally small—16.601 inches—the only approach to this measurement in Dublin being in 1870, when only 20.839 inches fell, in 1884, when the measurement was 20.467 inches, and in 1883, with its rainfall of 20.493 inches. In nine of the thirty-five years in question the rainfall was less than 26 inches.

The scanty rainfall in 1887 was in marked contrast to the abundant downpour in 1886, when 35.706 inches—or as nearly as possible double the fall of 1887—fell on 220 days. In 1900 the rainfall was 34.338 inches, or 5.668 inches in excess of the average for the thirty-five years, 1866-1900. Only twice since these records commenced has the rainfall in Dublin exceeded that of 1900—namely, in 1872, when 35.565 inches fell on 238 days, and in 1880, when 34.512 inches were measured on, however, only 186 days. In 1903 the rainfall was 31.601 inches on 258 days.

In 1904 there were 189 rainy days, or days upon which not less than .005 inch of rain (five thousandths of an inch) was measured. This was 9 under the average number of rainy days, which was 198 in the thirty-five years, 1866-1900, inclusive. In 1886 and 1887—the warm, dry years of recent times—the rainy days were only 160, and in 1870 they were only 145.

In 1904 the rainfall in 24 hours, from 9 a.m. to 9 a.m., on two occasions exceeded one inch—the maximum being 1.197 inches on September 12th. On May 31st the measurement was 1.092 inches. On no occasion in 1893 did one inch of rain fall on a given day in Dublin. In 1894 falls of upwards of an inch of rain in 24 hours were recorded on 4 occasions—viz., May 12th (1.330 inches); July 24th (1.560 inches); August 25th (1.369 inches); and October 23rd (1.042 inches). In 1895, 1.862 inches fell on January 12th; 1.014 inches on July 24th; and 1.256 inches on July 25th. In 1896, 1.563 inches fell on July 8th; 2.030 inches on July 24th; and 1.388 inches on December 8th. In 1897, 1.166 inches fell on September 1st. In 1898, on November 23rd, 1.732 inches were measured. In 1899, the rainfall exceeded one inch on 4 occasions—viz., July 11th (1.409 inches); August 5th (2.227 inches); September 30th (1.043 inches); and December 28th (1.139 inches). In 1900, as in 1899, the rainfall exceeded one inch on 4 occasions—namely, July 27th (1.783 inches); August 2nd (2.135 inches); November 8th (1.103 inches); and November 27th (1.136 inches). In 1901, the rainfall only once exceeded one inch, but on that occasion (November 11th) the measure-

ment was 2037 inches. In 1902, 1343 inches fell on July 25th, and 2075 inches on September 2nd. In 1903 the maximal daily rainfall was 766 inch on September 10th. The excessive rainfall on September 2nd, 1902, is noteworthy—it amounted to 2075 inches in Dublin (Fitzwilliam-square). It was the eighth occasion only since 1825—that is, in 80 years—upon which 2 inches have been measured in Dublin at 9 a.m. as the product of the preceding 24 hours' precipitation. The previous excessive falls were—August 13th, 1874 (2482 inches); October 27th, 1880 (2736 inches); May 28th, 1892 (2066 inches); July 24th, 1896 (2090 inches); August 5th, 1899 (2227 inches); August 2nd, 1900 (2135 inches); and November 11th, 1901 (2037 inches).

Included in the 189 rainy days in 1904 are 23 on which snow or sleet fell, and 24 on which there was hail. In January hail was observed on 5 days, in February on 2 days, in March on 7 days, in April on 4 days, in May on 3 days, and in November in 3 days. Snow or sleet fell on 3 days in January, 5 days in February, 7 days in March, 2 days in both April and December, and 4 days in November. Thunder was heard once in May, July and August. Thunderstorms occurred once in February, July and August. Lightning was seen three times in August, once in June, July, and December.

The rainfall in the first six months was 12817 inches on 162 days. The rainfall exceeded 3 inches only in February (3313).

The rainfall was distributed quarterly as follows.—7238 inches fell on 55 days in the first quarter, 4879 inches on 47 days in the second, 6330 inches on 50 days in the third, only 3083 inches on 37 days in the fourth and last quarter.

More or less fog prevailed on 61 occasions—6 in January, 7 in February, 7 in March, 1 in April, 2 in May, 3 in July, 3 in August, 6 in September, 7 in October, 7 in November, and 11 in December.

High winds were noted on 127 days—13 in January, 11 in February, 12 in March, 17 in April, 9 in May, 11 in June, 6 in July, 13 in August, 11 in September, 9 in October, 4 in November, and 11 in December. The high winds amounted to gales (force 7 or upwards, according to the Beaufort scale) on 36 occasions—6 in January, 4 in February, 3 in March, 5 in April, 3 in May, 1 in June, 4 in August, 1 in September, 3 in October, 2 in November, and 5 in December.

Solar halos were seen on 8 occasions, a lunar halo on 4 nights.

Mr. Robert O'Brien Furlong, M.A., C.B. writes—

The total number of inches of rain measured at Clonevin, Killybeg, in 1904, was 2214 on 182 days.

The rainfall of 1904 was 619 inches, and the number of days on which 0.1 or upwards of an inch fell was 2, below the average of 19 years (1885-1903)—viz., 28335 inches on 184 days.

The greatest amount measured in any month during 1904 was 356 inches on 20 days in February—the smallest, 29 inch on 12 days in October.

February is usually the month of lowest rainfall, the average being 1800 inches on 137 days. October, on the other hand, is next to August the month of greatest rain, the average being 313 inches on 163 days.

The greatest number of days on which rain fell in any month was 20 in February—the lowest, 10 in November.

The heaviest fall in 24 hours was on May, 31, when 1.07 inches fell. This was the only day on which 1 inch or upwards fell.

Snow, sleet, or hail was noticed on 11 days.

The rainfall of 1904 was one of the lowest recorded here since 1825, and ranks fourth in order. In 1887 the amount measured was 1754 inches on 148 days, in 1893, 1805 inches on 178 days; and in 1899, 1993 inches on 181 days. The four highest yearly rainfalls recorded during the same period were—in 1900 = 3535 inches on 206 days, in 1895 = 3239 inches on 180 days, in 1894 = 3244 inches on 196 days, and in 1903 = 3244 inches on 219 days.

Abstract of Meteorological Observations taken at Dublin (40 Fitzwilliam-square, West) during the Year 1904.

1904	45.7	48.7	49.7	48.7	52.6	57.8	61.1	58.6	56.5	54.4	48.5	44.9	50.2

NOTE.—The temperatures given above were obtained from the maximal and minimal readings of the thermometer. For the years 1884 to 1886 inclusive, Kew's Formula was used, viz.—Max. Temperature—Max. 4, (Min.—Max.) 41, for subsequent years the Formula used was the following:—Mean Temperature = Max. 4 (Max.—Min.) 5 C, the coefficient 5 varying from month to month.

ABSTRACT OF METEOROLOGICAL DATA FOR IRELAND, 1904.

Compiled from Tables prepared under the direction of the Meteorological Council, and published in the Quarterly Returns of the Registrar-General for Ireland.

In compiling the following Abstract (pp. 194-197) the stations have been grouped into two Districts, namely 1. Ireland North; 2. Ireland, South. Each District is represented by six stations.

In making a selection from the whole number of stations available, endeavour has been made to represent as far as possible the various meteorological conditions of the several districts. Regard has been had not only to uniformity of geographical distribution, but also to the situation of the stations with regard to the sea coast, their height above sea level, and to their special characteristics as representing urban, suburban, or rural meteorological conditions.

Observations of earth temperature and of wind-force are provided for in the Table. The wind-force observations are personal estimates in accordance with Beaufort's scale, and are specially liable to be affected by local circumstances. No previous comparison of corresponding data is available for the purpose of checking these results.

The stations selected, with the names of the Observers are shown below.

LIST OF STATIONS AND OBSERVERS.

* The Means of Observations are 2 a.m. and 8 p.m., local time, at all the Stations except Malin Head, Donaghmore, Blackband Point, and Blackband Point, and where also observations were made. The means from Hygrometer, and Cloud for Malin Head, Donaghmore, Blackband Point, and Blackband Point are based on observations as follows:—(Malin Head) 15 years, 1873-1887; (Donaghmore) 30 years, 1873-1902; (Blackband Point) 30 years, 1873-1902. The means for the number of days of Rain are given as follows:—(Malin Head) 15 years, 1873-1887; (Donaghmore) 30 years, 1873-1902; (Blackband Point) 30 years, 1873-1902. The means for the number of days of Fog are given as follows:—(Malin Head) 15 years, 1873-1887; (Donaghmore) 30 years, 1873-1902; (Blackband Point) 30 years, 1873-1902. The means for the number of days of Cloud are given as follows:—(Malin Head) 15 years, 1873-1887; (Donaghmore) 30 years, 1873-1902; (Blackband Point) 30 years, 1873-1902.

during each Quarter of the Year 1904, compiled from Tables prepared under the direction of the Meteorological Council, of the Registrar-General for Ireland.

* The Means of Observations are 8 a.m. and 5 p.m., based upon all the Stations except Mullin Head, Donaghadee, Blackhead Point, and Rock's Point, a.m., and where the Greenwich time is kept. The results under Barometer, Hygrometer, and Cloud for Mullin Head, Donaghadee, Blackhead Point, and Rock's Point are given for the Quarter and for the Year.

† The Statistics used are based on observations as follows:—Barometer 20 years, 1860-1880; Temperature 20 years, 1871-1890; Dew-point 20 years, 1871-1890; Clouds, and the number of Days of Storm are given in the table.

‡ The Statistics for the Station are obtained at the Monthly Observatory in the Phoenix Park. The values for Earth Temperature are based

during each Quarter of the Year, 1904, compiled from Tables prepared under the direction of the Meteorological Council, of the Registrar-General for Ireland.
